Gutierrez,2024-10-31 The solution to the significant modern problems that impede the development of human society demands a cultural evolution based on knowledge All the necessary disciplinary tools already exist it is only essential to organize them into a coherent interdisciplinary complexity encompassing natural social and human sciences However ignorance in its most modern forms conveniently disperses the diversity of disciplinary knowledge transforming complementary differences into conflicts the potential of diversity into the injustice of prejudice and the power of complexity into the realm of complication Human beings have the capacity to imagine and innovate their own future to solve and dissolve with enlightenment the problems they have created in their ignorance to liberate themselves and take responsibility to develop values and to create a coherent and objective vision of the world They can imagine and build a synergy of personal and social futures developing both in a sustainable way Modern interdisciplinary knowledge clearly shows that the future of humanity can be bright if it manages to consistently integrate natural social and human knowledge overcoming the power of modern forms of ignorance that separate them and create artificial conflicts Knowledge Engineering Hamed Fazlollahtabar,2020-11-09 Knowledge management is far reaching It can dramatically reduce costs such as costs of office work repetition human resource retirement information reuse etc Rather than reinventing the wheel and having it be a costly and inefficient activity systematic reuse of knowledge can show substantial cost benefits immediately This book shows how to develop process oriented methodologies covers both interorganizational and enterprises models discusses how knowledge management can dramatically reduce costs and increase speed of response presents a wide range of quantitative methods applied to various knowledge engineering problems and offers several graphical presentations of models and processes Academicians and practitioners in the area of knowledge management and engineering especially managers in industries will find this book useful The material might also be useful in knowledge management graduate studies Knowledge Networks Paul M.
