    Component-based Product Line Engineering with UML Colin Atkinson,2002 A cutting edge UML based approach to software development and maintenance that integrates component based and product line engineering methods ripe market development of component based technologies is a major growth area CBD viewed as a faster more flexible way of building systems that can easily be adapted to meet rapidly changing business needs and integrate legacy and new applications e g Forrester report in June 1998 predicted that by 2001 half of packaged apps vendors will deliver component based apps e g Butler Group Management Briefing 2000 Butler Group is now advising that all new build and significant modification activity should be based on component architectures Butler Group belives that Component Based Development is one of the most important events in the evolution of information technology e g Gartner Group estimates that by 2003 70% of new applications will be deployed as a combination of pre assembled and newly created components integrated to form complex business systems The book defines describes and shows how to use a method for component based product line engineering supported by UML This method aims to dramatically increase the level of reuse in software development by integrating the strengths of both of these approaches UML is used to describe components during the analysis design ERP business software system as appendix or separate chapter bibliography glossary appendices covering UML profiles concise process description in the form of UML activity diagrams refinement translation patterns AUDIENCE Software engineers architects project managers Software engineers working in the area of distributed enterprise systems who want a method for applying a component based or product line engineering approach in practice   Software Architecture Ivica Crnkovic,Volker Gruhn,Matthias Book,2011-09-15 This book constitutes the refereed proceedings of the 5th European Conference on Software Architecture ECSA 2011 held in Essen Germany in September 2011 The 13 revised full papers presented together with 24 emerging research papers and 7 research challenge poster papers were carefully reviewed and selected from over 100 submissions The papers are organized in topical sections on requirements and software architectures software architecture components and compositions quality attributes and software architectures software product line architectures architectural models patterns and styles short papers process and management of architectural decisions software architecture run time aspects ADLs and metamodels and services and software architectures   **Objects, Components, Architectures, Services, and Applications for a Networked World** Mehmet Aksit,Mira Mezini,2003-02-25 This book constitutes the thoroughly refereed post proceedings of the international conference NetObjectDays 2002 held in Erfurt Germany in October 2002 The 26 revised full papers presented were carefully selected during two rounds of reviewing and revision The papers are organized in topical sections on embedded and distributed systems components and MDA Java technology Web services aspect oriented software design agents and mobility software product lines synchronization testing refactoring and CASE tools   **Reuse of Off-the-Shelf Components** Maurizio Morisio,2006-07-25 This book constitutes
