Computer Based Patient Record:

The Computer-Based Patient Record Institute of Medicine, Committee on Improving the Patient Record, 1997-10-14
Most industries have plunged into data automation but health care organizations have lagged in moving patients medical records from paper to computers In its first edition this book presented a blueprint for introducing the computer based patient record CPR The revised edition adds new information to the original book One section describes recent developments including the creation of a computer based patient record institute An international chapter highlights what is new in this still emerging technology An expert committee explores the potential of machine readable CPRs to improve diagnostic and care decisions provide a database for policymaking and much more addressing these key questions Who uses patient records What technology is available and what further research is necessary to meet users needs What should government medical organizations and others do to make the transition to CPRs The volume also explores such issues as privacy and confidentiality costs the need for training legal barriers to CPRs and other key topics

The Computer-based Patient Record Institute of Medicine (U.S.). Committee on Improving the Patient Record, Richard S. Dick, Elaine B. Steen, 1991
Produced by the Institute of Medicine this volume presents a blueprint for introducing the computer based patient record CPR nationwide within the next decade An expert panel explores the potential of the machine readable CPR to improve diagnostic and care decisions and provide a database for po

Aspects of the Computer-based Patient Record Marion J. Ball, 1992

Aspects of the Computer-based Patient Record Marion J. Ball, M.F. Collen, 1992
The increasing need of patients for better access to good quality care the great mobility of people in this nation and their quest for care from a variety of health care professionals The need for faster and lower cost electronic claims reimbursement processes all have made it very clear that it has become essential that throughout this country the current obsolescent paper based medical records must be replaced as soon as possible by computer based patient records In recognition of this high priority need the Institute of Medicine IOM formed the Committee on Improving the patient record The result was the publication of the computer based patient record An essential technology for health care The support of this IOM project by members of its committee and subcommittees resulted in the preparation of such a large number of worthy supporting papers that it was not possible to include them in the IOM publication Accordingly the IOM authorized the editors of this book to publish separately some papers that fit appropriately into this more technology oriented book

The Computer-based Patient Record Jan H. van Bommel, Alexa Thorlichen McCray, 1995-01
The theme of this year s IMIA Yearbook of Medical Informatics is the computer based patient record Many institutions around the world are developing and using systems that rely on electronic records of patient encounters and many others are considering a move in that direction

A host of issues arises including data integrity data security and patient confidentiality The reader will find many of these issues discussed in this edition of the Yearbook both in review papers and several of the selected articles This Yearbook contains 47 articles organized into seven sections The sections are Health and clinical management Computer based patient records Information systems Image and signal processing Decision support systems Knowledge processing Education

Aspects of the Computer-based Patient Record Harold P. Lehmann, Patricia A. Abbott, Nancy K. Roderer, Adam Rothschild, Steven Mandell, Jorge Ferrer, Robert E. Miller, Marion Ball, 2013-02-14 One of the hottest political issues today concerns ways to improve national healthcare systems without incurring further costs An extensive study by the Institute of Medicine IOM in the United States formally reported that computer based patient records are absolutely necessary to help contain the cost explosion in health care The information obtained from experts the studies conducted and the conclusions that went into the IOM s report have now been collected in *Aspects of the Computer Based Patient Record* A large portion of the volume discusses the state of the art in existing computer based systems as well as the essential needs which must be addressed by future computer based patients records A final section in the book discusses implementation strategies for changing to the electronic system and practical issues Who will bear the final cost How and when will healthcare providers who use the system be trained This volume contains the concise valuable information which hospital administrators hospital systems designers third party payer groups and medical technology providers will need if they hope to successfully transit to hospital systems which use a computer based patient record

An Investigation of Computer-based Patient Record Systems in Health Care Lesa K. Heiks, 1995 The United States health care system is undergoing significant changes in this last decade of the 20th century Pressures to reduce health care costs and improve health care quality from the federal and state governments employers third party payers and consumers have greatly contributed to substantial changes in both the structure of the system and the way in which health care is delivered Health care organizations are becoming vertically integrated Various provider groups once considered competitors are now partnering to provide a seamless system in which to deliver health care One of the most critical elements needed to tie provider groups employers payers and consumers together in order to make these changes work effectively and efficiently is shared data and information Information technology development while lagging behind most other American industries is finally reaching health care Powerful low cost computers and networking is making it practical to extend information technology to the actual delivery points within health care systems Computerization of health information offers many opportunities to improve the quality of the nation s health care and reduce it s costs however a fundamental change in information gathering use and access is needed This fundamental change in computer based patient record CPR systems This paper presents the results of a thorough investigation of CPR systems including a description of the technology and how the technology fits in to the information technology dynamics in health care an assessment of the issues and obstacles concerning this technology examples of health

care organizations that have implemented such systems and a review of system software and vendors The paper also presents elements of a high level plan to develop and implement a system within a health care organization Abstract

Computer-based Patient Records United States. General Accounting Office,2001 *Introducing computer-based patient records* ,1998 The project Electronic Health Care Records Datoriserad V rdDokumentation hereafter abbreviated DVD was created for the purpose of simplifying record keeping for all staff in health care that are required to create retrieve and compile information from the patient records The overall purpose was to provide recommendations for the design of multi professional multimedia based patient records of high quality Such patient records are expected to be of great help in the daily work with patients and to make follow ups of the activities possible in quantitative qualitative and economic terms Increased specialisation and the developments towards process oriented health care means that more and more persons will be involved in the solving of the problems of the patient These persons will not be at the same location and they will not belong to the same unit but they will all need immediate access to the entire patient record of the patient A Practical Introduction to Health Information Management Lisa T. Johns,1998 Introducing the best one step source of practical health information management guidance In this text your students will find information they need to know for every key area of health information management information management standards and requirements clinical data systems computerized patient records confidentiality and security issues quality improvement telemedicine people management issues and much more **The Computer-Based Patient Record; an Essential Technology for Health Care** Institute Of Medicine .
