Computing for Geographers John A. Dawson, David J. Unwin, 1976-01-01 *Computing for Geographers* John A. Dawson, David John Unwin, 1976 *Computer Applications in Geography* Paul M. Mather, 1991-08-26 *Computer Applications in Geography* Paul M Mather Department of Geography University of Nottingham England Geography graduates are expected to be computer literate yet the literature on computing is often inaccessible to them This book is intended for undergraduate students of geography who wish to familiarise themselves with the terminology of computers and to read about the ways in which computers are presently being used in geography It assumes no prior knowledge of computers and no mathematical skills beyond those possessed by the average layman The first two chapters form a technical introduction to computers and data The remaining five chapters are devoted to individual topics representing a selection of the main areas of computer use in geography and show how computers can be used to acquire process and display geographical data Worked examples with example data sets are given for three program packages that are widely used by geographers SPSS SYMAP and GIMMS The book is comprehensive in its coverage of the major areas of computer applications and will be of interest to geographers dealing with statistics digital cartography remote sensing geographical information systems and simulation models Computing for geographers. John A. Dawson and David J. Unwin. [Mit Abb. u. Tab.] John A. Dawson, 1976 *Teaching Computing to Geographers* Philip H. Rees, Bob Barr, Institute of British Geographers. Conference, 1985 **High Performance Computing and the Art of Parallel Programming** Stan Openshaw, Ian Turton, 2000 This book provides a non technical introduction to High Performance Computing applications together with advice about how beginners can start to write parallel programs The authors show what HPC can offer geographers and social scientists and how it can be used in GIS They provide examples of where it has already been used and suggestions for other areas of application in geography and the social sciences Case studies drawn from geography explain the key principles and help to understand the logic and thought processes that lie behind the parallel programming **Computers in Geography** David J. Maguire, 1989 Maguire geography U of Leicester explains how geographers can enhance their work by using computers Assumes little knowledge of computers Begins with an overview of computers in the field then continues with coverage of how they can be used in each of the major stages of the process of geographical explanation covering data collection storage management analysis and presentation Annotation copyrighted by Book News Inc Portland OR *Computing Geographically* David O'Sullivan, 2024-01-12 Geographic information science GISc and systems GIS have grown rapidly in recent decades increasingly on a separate track from geographic thought As geography's big ideas such as space place boundaries scale process and relationality have evolved what does this mean for their computational representation This book considers how key concepts have developed in geography and are represented or not in GISc with a view to bridging gaps between the two David O Sullivan shows how revisiting the theoretical underpinnings of geography

offers insights on enduring GIS challenges including map projections the modifiable areal unit problem scale and map generalization and the nature of space and place while also enriching geographic thought The book uses examples from across geography s disciplines to promote understanding Chapters are self contained essays that can easily form the basis of classroom discussions The companion website provides the figures code to produce versions of selected figures updated web links and other resources

High Performance Computing and the Art of Parallel Programming Stan Openshaw,Ian Turton,2005-09-19 This book provides a non technical introduction to High Performance Computing applications together with advice about how beginners can start to write parallel programs The authors show what HPC can offer geographers and social scientists and how it can be used in GIS They provide examples of where it has already been used and suggestions for other areas of application in geography and the social sciences Case studies drawn from geography explain the key principles and help to understand the logic and thought processes that lie behind the parallel programming

Geography and Technology Stanley D. Brunn,Susan L. Cutter,J.W. Harrington Jr.,2004-05-31 It is particularly appropriate that the AAG s Centennial Celebration should prompt the publication of a volume devoted to Geography and Technology New technologies have always been important in advancing geographic understanding but never have they been so thoroughly and rapidly transformative of the discipline as at this stage in geography s evolution Just as new technologies have profoundly expanded both research possibilities and the knowledge base of other disciplines such as biology physics or medicine so too are the revolutionary new geographic technologies developed during the past few decades extending frontiers in geographic research education and applications They are also creating new and resurgent roles for geography in both society and in the university This trend is still accelerating as the integration of geographic technologies such as the global positioning system and geographic information systems GPS GIS is creating an explosion of new real time real world applications and research capabilities The resultant dynamic space time interactive research and management environments created by interactive GPS GIS among other technologies places geography squarely at the forefront of advanced multidisciplinary research and modeling programs and has created core organization management tools geographic management systems which will dramatically change the way governments and businesses work in the decades ahead While these and other important geographic technologies including remote sensing location based services and many others addressed in this book are forging new opportunities for geography and geographers they also pose challenges

Geographers and Environmental Scientists William Aitken, J. McG. Hotson, University of Edinburgh, 1974 **Teaching Computing to Geographers** Bob Barr, Phil Rees, 1985 *Computer Assisted Instruction in Geography* Association of American Geographers. Commission on College Geography, 1969 **Computer-assisted Cartography** Mark S. Monmonier, 1982 **A Geographer's Guide to Computing Fundamentals** Jamison Conley, 2022-10-31 This upper undergraduate textbook teaches students programming in GIS using a mix of computer science theory and hands on

activities with the aim of empowering students to understand fundamentals and apply their knowledge beyond the specific examples in the book Each of the book s twenty one chapters integrates instructional material with exercises in ArcGIS Pro In doing so this book combines the strengths of workbooks and theoretical textbooks to provide a holistic and comprehensive text Each chapter concludes with an unguided task that ensures students have learned the broader principles explained therein In addition to its unique format the book covers oft neglected topics such as debugging creating a program from scratch and managing metadata Section I starts with the principles of scripting and programming with Python Section II introduces the ArcPy module and elements specific to ArcGIS Pro This section focuses on data structures and how they are used and implemented within Python Section III uses the topic of algorithms to guide the student through creating tools to add functionality to ArcGIS Pro The last section Section IV builds upon section III to guide the student to developing and sharing projects and Python packages to include external open source code and share the Python code as an open source package This text will prepare students for a long term ability to do GIS programming whether in industry or academic research This comes from the author s observations of students who have learned GIS programming in one platform such as VBA in ArcMap struggle to apply that knowledge to a new platform such as Python in ArcGIS Pro because the content was presented too closely with a specific platform The integration of exercises with conceptual content along with the choice of chapter content serves this goal of preparing students for working in a dynamic rapidly changing technology field
