Comprehensive Biochemistry Marcel Florin,Elmer Henry Stotz,1968 *Selected Topics in the History of Biochemistry* G. Semenza,A.J. Turner,2003-04-15 This book is the latest volume in a highly successful series within Comprehensive Biochemistry and provides a historical and autobiographical perspective of the development of the field through the contributions of leading individuals who reflect on their careers and their impact on biochemistry The book is essential reading for everybody from graduate student to professor placing in context major advances not only in biochemical terms but in relation to historical and social developments Readers will be delighted by the lively style and the insight into the lives and careers of leading scientists of their time Handbook of Genetics Robert King,2012-12-06 The purpose of the first four volumes of the Handbook of Genetics is to bring together collections of relatively short authoritative essays or annotated compilations of data on topics of significance to geneticists Many of the essays will deal with various aspects of the biology of certain species or species groups selected because they are favorite subjects for genetic investigation in nature or the laboratory Often there will be an encyclopedic amount of information available on such species with new papers appearing daily Most of these will be written for specialists in a jargon that is bewildering to a novice and sometimes even to a veteran geneticist working with evolutionarily distant organisms For such readers what is needed is a written introduction to the morphology life cycle reproductive behavior and culture methods for the species in question What are its particular advantages and disadvantages for genetic study and what have we learned from it Where are the classic papers the key bibliographies and how does one get stocks of wild type or mutant strains Lists giving the symbolism and descriptions for selected mutants that have been retained and are thus available for future studies are provided whenever possible Genetic and cytological maps mitotic karyotypes and haploid DNA values are also included when available Volume 4 deals with certain vertebrate species that have been studied in considerable detail from the standpoint of genetics or molecular

cytogenetics Such data are available for only a relatively few vertebrates **Comprehensive Biochemistry** Marcel Florkin, Elmer Henry Stotz, 1962 *Chemie der Pflanzenschutz- und Schädlingsbekämpfungsmittel* Richard Wegler, 2012-12-06 *The Chemistry of Organophosphorus Pesticides* Christa Fest, K.-J. Schmidt, 2012-12-06 Our intention has been to provide a short introduction to the chemistry and mode of action of insecticidal phosphoric acid compounds with particular reference to the relationship between structure and activity The yearly production of these pesticides is now approaching 100 000 tons and thus offers an important example of applied research If however one examines the historical development of these compounds it is apparent that this was preceded by a hundred years of pure chemistry of phosphorus The utility of the phosphoric acid pesticides is undisputed today and furthermore it can be expected that they will solve many of the world's nutritional problems yet from this field of applied research many paths are now leading back into basic research in chemistry biochemistry biology and toxicology etc This clearly illustrates the problem of attempting to define pure and applied research Originally this book was conceived for students of chemistry who on completion of their study were uncertain about the place of applied research in industry but it was soon clear that such material when supplemented with further data would serve as an introduction to the field of pesticidal phosphoric acid compounds for many technicians officials and scientists who in various authorities in agriculture in chemical and biological research are concerned with the problems of crop protection and more recently with questions of pollution of the environment **Arch Int Physiol Biochim**, 1967 **The Enzymes** Paul D.
