announced pillars of a strategy for transforming the U S military Yet changes in the enterprise of MS A have not kept pace
with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the
technology available to meet those demands To help address those concerns DOD asked the NRC to identify shortcomings in
current practice of MS A and suggest where and how they should be resolved This report provides an assessment of the
changing mission of DOD and environment in which it must operate an identification of high level opportunities for MS A
research to address the expanded mission approaches for improving the interface between MS A practitioners and decision
makers a discussion of training and continuing education of MS A practitioners and an examination of the need for

Bialke,2025-09-01 With space industry professionals and university students this book offers a practical technical reference
for seeking to understand the state of the art in spacecraft momentum control systems The focus is control moment
gyroscope CMG technology but general principles of momentum control for example through reaction wheels magnetic
torque actuation and other means are presented These key topics are treated in several contexts systems engineering and
spacecraft architecture attitude control and dynamics and mission operations The subject matter is developed with
theoretical rigor and in terms of practical implementation in flight hardware software This book is the first to address CMG
technology in depth let alone from a practitioner s perspective It is also timely given the rise of commercial Earth imaging
the imminent need for high torque manipulation of satellites for servicing and assembly the advances in privately built
spacecraft including small satellites and the growing popularity of the subject matter in academia over the past two decades
The current edition includes exercises suitable for upper level undergraduate courses and graduate level courses in
spacecraft attitude dynamics and control spacecraft design and space systems engineering This second edition provides more
applications attitude control momentum and nutation dumping isolation system identification systems engineering bearings
