Computer Science Logo Style: Symbolic computing Brian Harvey, 1997 This series is for people adults and teenagers who are interested in computer programming because it s fun The three volumes use the Logo programming language as the vehicle for an exploration of computer science from the perspective of symbolic computation and artificial intelligence Logo is a dialect of Lisp a language used in the most advanced research projects in computer science especially in artificial intelligence Throughout the series functional programming techniques including higher order functions and recursion are emphasized but traditional sequential programming is also used when appropriate In the second edition the first two volumes have been rearranged so that illustrative case studies appear with the techniques they demonstrate Volume 1 includes a new chapter about higher order functions and the recursion chapters have been reorganized for greater clarity Volume 2 includes a new tutorial chapter about macros an exclusive capability of Berkeley Logo and two new projects Throughout the series the larger program examples have been rewritten for greater readability by more extensive use of data abstraction Volume 1 Symbolic Computing is addressed to a reader who has used computers and wants to learn the ideas behind them Symbolic computing is the manipulation of words and sentences in contrast both to the graphics most people associate with Logo and to the numerical computation with which more traditional languages such as Pascal and C are most comfortable This volume is well known for its clear and thorough presentation of recursion a key idea in computer science that other texts treat as arcane and difficult The Logo programs in these books and the author s free Berkeley Logo interpreter are available via the Internet or on diskette
