Department of Architecture, 1993 We understand the world through our senses What we see hear touch what we experience is a construct of a reality that is individual flexible and in motion Our thoughts and behavior and the quality of our existence rests on perception of ourselves and our environments We experience the world personally with the ability to edit our experiences by denying ignoring enhancing or changing what we see Technical developments have made it possible to experience environments that are already altered when they reach one's senses Modern society is being shaped by the designed pre packaged environment Visual realities are now pre fabricated canned for consumption for an audience increasingly dependent on information fed by others This thesis plus its accompanying installation is based on the premise that images shape thought and that the creative process of image making can be used to learn about the living environment through video and computer graphics representations The written part of the thesis examines the changing role of the individual and the artist in a world increasingly shaped by mass media It proposes an alternate visual communications system for investigating and sharing living environments The accompanying installation demonstrates the system's educational and creative potential through a visual exploration that plays with the notion of the reliability of perception It opens a window on the creative process transforming the artist's studio into a box of illusions and simulations that reflect the illusive nature of art *Visualization of Digital Terrain and Landscape Data* Rüdiger Mach, Peter Petschek, 2007-04-24 This book reflects a profound change that has taken place in the practice of landscape architecture and planning in the past twenty years Traditional modes of representation pen pencil watercolor marker et al have been supplanted by digital modeling and animation This transformation is not just in the medium of representation however it is more than a substitution of one marking device for another such as may have been the case in the past when for example mechanical pens with cartridges replaced pens with

Even changes such as that had their impacts as longer straighter lines for example or more precision in details became possible on the interplay between designer design dium and designed artifact s. The emergence of digital media as rep sentational tools for designers has accompanied a transformation in the language of discourse in design and planning in the very conception of the designed world we live in and in the substance and role of the essential representations and abstractions used by planners and designers. In the past when 2D planar representations drawings usually on paper served as the conventional means of communication for designers both with themselves and with others physical objects or arrangements in 3D were transformed into a series of lines in 2D plans sections elevations e g **Silicon landscapes** Peter Geoffrey Hall,1985 *Creation of Simple Landscape Scenes by Computer* Richard Lawrence Lewandowski,1971 Technologies and Protocols for the Future of Internet Design Deo Prakash Vidyarthi,2012 The Internet has changed significantly from its beginnings as a simple network used to pass data from one computer to another.
