Networking For Beginners Kevin Kali, 2020-10-11 Do you want to learn how to set up a new network Do you want to learn more about Network Security If you want to know more about Computer Networking then keep reading Computer networking has been around for ages starting from the wired to the present wireless systems We have been able to do justice to everything you need to kick start your knowledge of computer networking in this book Getting familiar with the components and implementing your own networks should come easier

Networking of Computers requires so many infrastructures for a seamless operation The various types of network structures require different parts These will be looked at extensively in the course of this book

Physical network infrastructures are needed for a Computer Network which includes but is not limited to switches routers wireless access points etc There is also some underlying firmware that makes these infrastructures function correctly Other than the physical systems there is also the needed software deployed to monitor manage and secure the network

For advanced networks there is a need for standard protocols which are designed to perform numerous discrete functions These protocols are also used to communicate different data types irrespective of the underlying hardware For instance in the telephone system a voice over IP VoIP can bring about the transportation of IP telephony traffic from one point to another once these points support the protocol This is also similar to what occurs in the browser with the HTTP providing portals to accessing webpages Also over an IP based network the IP protocols to transport data and services since there is protocol compatibility This guide will focus on the following
