Mather, 2005-12-13 Remotely sensed images of the Earth's surface provide a valuable source of information about the geographical distribution and properties of natural and cultural features This fully revised and updated edition of a highly regarded textbook deals with the mechanics of processing remotely sensed images Presented in an accessible manner the book covers a wide range of image processing and pattern recognition techniques Features include New topics on LiDAR data processing SAR interferometry the analysis of imaging spectrometer image sets and the use of the wavelet transform An accompanying CD ROM with updated MIPS software including modules for standard procedures such as image display filtering image transforms graph plotting import of data from a range of sensors A set of exercises including data sets illustrating the application of discussed methods using the MIPS software An extensive list of WWW resources including colour illustrations for easy download For further information including exercises and latest software information visit the Author's Website at [http://homepage.ntlworld.com/paul\\_mather/ComputerProcessing3](http://homepage.ntlworld.com/paul_mather/ComputerProcessing3)

**Computer Processing of Remotely-Sensed Images** Paul M. Mather, Magaly Koch, 2022-04-06 Computer Processing of Remotely Sensed Images A thorough introduction to computer processing of remotely sensed images processing methods and applications Remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible This is done through the analysis and interpretation of electromagnetic radiation EMR that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target This methodology is particularly of importance in Earth observation by remote sensing wherein airborne or satellite borne instruments of EMR provide data on the planet's land seas ice and atmosphere This permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the Earth's surface or within the atmosphere Still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images The new edition's content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the Copernicus missions microsatellites and recently launched SAR satellites as well as time series analysis methods The fifth edition of Computer Processing of Remotely Sensed Images also contains A cohesive presentation of the fundamental components of Earth observation remote sensing that is easy to understand and highly digestible Largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand Illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information References and links to the most up to date online and open access sources used by students Computer

Processing of Remotely Sensed Images is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments

*Computer Processing of Remotely-Sensed Images* Paul M. Mather, Magaly Koch, 2011-07-28 This fourth and full colour edition updates and expands a widely used textbook aimed at advanced undergraduate and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments Existing material has been brought up to date and new material has been added In particular a new chapter exploring the two way links between remote sensing and environmental GIS has been added New and updated material includes A website at [www.wiley.com/go/mather4](http://www.wiley.com/go/mather4) that provides access to an updated and expanded version of the MIPS image processing software for Microsoft Windows PowerPoint slideshows of the figures from each chapter and case studies including full data sets Includes new chapter on Remote Sensing and Environmental GIS that provides insights into the ways in which remotely sensed data can be used synergistically with other spatial data sets including hydrogeological and archaeological applications New section on image processing from a computer science perspective presented in a non technical way including some remarks on statistics New material on image transforms including the analysis of temporal change and data fusion techniques New material on image classification including decision trees support vector machines and independent components analysis and Now in full colour throughout This book provides the material required for a single semester course in Environmental Remote Sensing plus additional more advanced reading for students specialising in some aspect of the subject It is written largely in non technical language yet it provides insights into more advanced topics that some may consider too difficult for a non mathematician to understand The case studies available from the website are fully documented research projects complete with original data sets For readers who do not have access to commercial image processing software MIPS provides a licence free intuitive and comprehensive alternative

*Remote Sensing Digital Image Analysis* John A. Richards, 2012-09-09 Remote Sensing Digital Image Analysis provides the non specialist with a treatment of the quantitative analysis of satellite and aircraft derived remotely sensed data Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the

fundamentals have substantially remained the same This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an operational framework for the analysis of remote sensing data The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background Each chapter covers a different aspect of the analysis of digital remotely sensed data without an excessively detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter

**Image Interpretation in Geology** Stephen A. Drury,1993 The second edition of Image Interpretation in Geology has been fully rewritten to take account of recent advances in geographic information systems GIS and digital image processing The basic physical principles of remote sensing and how they are applied in acquiring image data from aircraft and satellites are described in detail and are then related to the relevant physiology and psychology of human vision From here images from different climate zones of minerals the rocks and soils that they make up common geological structures and geologically controlled vegetation are analysed using the basic mathematical principles of digital processing and GIS In particular the second edition covers all aspects of remote sensing in geology without requiring sophisticated use of mathematics includes a new chapter on applications gives guidelines for the use of remote sensing and GIS and is illustrated by a comprehensive selection of outstanding half tones stereoscopic and colour images This comprehensive text will serve the needs of intermediate and advanced geology and environmental science undergraduates on aerial photograph interpretation and remote sensing courses It is also suitable for postgraduates and professional geologists involved in digital image processing GIS and geological mapping BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved
