Different Face:

Advances in Face Detection and Facial Image Analysis Michal Kawulok, Emre Celebi, Bogdan Smolka, 2016-04-02 This book presents the state of the art in face detection and analysis. It outlines new research directions including in particular psychology based facial dynamics recognition aimed at various applications such as behavior analysis, deception detection and diagnosis of various psychological disorders. Topics of interest include face and facial landmark detection, face recognition, facial expression and emotion analysis, facial dynamics analysis, face classification, identification and clustering and gaze direction and head pose estimation as well as applications of face analysis.

When Face Recognition Goes Wrong Catriona Havard, 2024-10-29 *When Face Recognition Goes Wrong* explores the myriad ways that humans and machines make mistakes in facial recognition. Adopting a critical stance throughout the book, it explores why and how humans and machines make mistakes, covering topics including racial and gender biases, neuropsychological disorders and widespread algorithm problems. The book features personal anecdotes alongside real world examples to showcase the often life changing consequences of facial recognition going wrong. These range from problems with everyday social interactions through to eyewitness identification leading to miscarriages of justice and border control passport verification. Concluding with a look to the future of facial recognition, the author asks the world's leading experts what are the big questions that still need to be answered and can we train humans and machines to be super recognisers. This book is a must read for anyone interested in facial recognition or in psychology, criminal justice and law.

The Changing Face of Corpus Linguistics Antoinette Renouf, Andrew Kehoe, 2006 This volume is witness to a spirited and fruitful period in the evolution of corpus linguistics. In twenty two articles written by established corpus linguists, members of the ICAME International Computer Archive of Modern and Mediaeval English association, this new volume brings the reader up to date with the cycle of activities which make up this field of study as it is today: dealing with corpus creation, language varieties, diachronic corpus study from the past to present, present day synchronic corpus study, the web as corpus and corpus linguistics and grammatical theory. It thus serves as a valuable guide to the state of the art for linguistic researchers, teachers and language learners of all persuasions. After over twenty years of evolution, corpus linguistics has matured, incorporating nowadays not just small, medium and large primary corpus building but also specialised and multi dimensional secondary corpus building, not just corpus analysis but also corpus evaluation, not just an initial application of theory but self reflection and a new concern with theory in the light of experience. The volume also highlights the growing emphasis on language as a changing phenomenon, both in terms of established historical study and the newer short range diachronic study of 20th century and current English, and the growing area of overlap between these two. Another section of the volume illustrates the recent changes in the definition of corpus which have come about due to the emergence of new technologies and in particular of the availability of texts on the world wide web. The volume culminates in the contributions by a group of corpus grammarians to a timely and novel discussion.
