absolutely need to search within ourselves to make sure we are free from such blames How does human brain works as far as learning is concerned Exams are a necessity that we cannot do away with in today s world but studying for exams alone does not guarantee knowledge and skills that are needed in real life This is a challenge that every educators and students face today When we study only for an exam our brain naturally cannot commit those chunks of information into permanent memory because sub consciously we wanted our brain only to retrieve those pieces of information in few weeks during the exam So majority of people cannot retain 70 80% of the information one month after the exam if it was not revised regularly I would be more than glad if someone proved me that I am wrong However once we write an investigative article or a short piece on a certain topic in our own words we don t forget about it plus we gain additional perspectives on the topic In my humble opinion it is in our own advantage to study for life beyond exams As a fellow student I am optimistic that what I say here will be taken in a positive spirit We are living in an interesting time when the world is making leaps and bounds in the field of health science The diseases that were not curable before few decades are cured easily and preventive medicines even nullify the possibility of many diseases The research in stem cells and biotechnology is developing in such a rate that now doctors are taking steps in detecting the possibility of certain diseases in one s life through genetic information and correcting those faulty genes even before birth The scientists doctors and researchers spend their lifetimes solely for such breakthroughs needless to mention the billions of dollars spent In such a rapidly changing time we as Sowa Rigpa students all want to become great future healthcare providers This is undisputedly a great aspiration and even a noble one However just noble thoughts and flowery words will mean nothing if it is not translated into concrete action and obtained results While maintaining the integrity of our medical system if we as Sowa Rigpa practitioners were not able to keep up with the time our goal of providing people the best possible health service may not be materialized To highlight some of the things that happened in 2018 pertaining to Sowa Rigpa In July American chemistry society USA published a paper claiming the mercury level in Tibetan medicine is causing an environmental hazard in Tibet and China Unbiased analysts believe that it is nothing but another sham that Chinese government enacted because ACS clearly acknowledged that the funds came from the Chinese government and they merely published the paper on its website Since China cannot possibly deny the destruction and havoc brought on the third pole of the world for economic gains in an effort to mislead the world and wash their hands off they tried to blame the destruction of Tibetan environment to Tibetan medicine In the article itself it does not talk about the thorough process that is strictly followed to detoxify or tame it before using it in Tibetan medicines In another drama they added the medicinal bath therapy of Lum in UNESCO list as world intangible cultural heritage They on one hand want Sowa Rigpa to take the blames of environmental destruction and on the other hand want to claim full patent rights on Sowa Rigpa as China s intellectual property What more is unreasonable than this What can we do in the wake of such developments Last but not the least I would like to say thank you all who contributed your writings for this very important

platform Such journals are crucial part of educational curriculum Particularly in the traditional system of education three things are deemed indispensable namely lecture debate and composition Each one of them is equally important for a holistic quality education We believe publishing this journal is serving as a small part in fulfilling the requirements of composition In fact I don't need to emphasize more on the importance of learning through composition because Yuthok Yonten Gampo himself clearly stated in Gyueshi that the foundation to become a great physician is to excel in reading and composition in the 31st chapter of explanatory tantra Finally we thank Dr Namdol Lhamo la for proofreading the articles and sharing her insights with us We also thank you all very much for giving us this opportunity to serve as the English editor of this journal Our very limited experience and lack of proper knowledge in English language were the greatest obstacles to work in our best abilities Even so we are very happy to put our best efforts in this endeavor for we consider it an honor to have your trust and support May the merits of our collective efforts bear the fruits soon to free sentient beings from suffering We wish you all a very happy and meaningful academic year 2019 Yours Sincerely Thupten Palden

Modelling for Coastal Hydraulics and Engineering K. W. Chau, 2010-01-22 Mechanistic models are often employed to simulate processes in coastal environments However these predictive tools are highly specialized involve certain assumptions and limitations and can be manipulated only by experienced engineers who have a thorough understanding of the underlying principles This results in significant constraints on their manipulation as well as large gaps in understanding and expectations between the developers and users of a model Recent advancements in soft computing technologies make it possible to integrate machine learning capabilities into numerical modelling systems in order to bridge the gaps and lessen the demands on human experts This book reviews the state of the art in conventional coastal modelling as well as in the increasingly popular integration of various artificial intelligence technologies into coastal modelling Conventional hydrodynamic and water quality modelling techniques comprise finite difference and finite element methods The novel algorithms and methods include knowledge based systems genetic algorithms artificial neural networks and fuzzy inference systems Different soft computing methods contribute towards accurate and reliable prediction of coastal processes Combining these techniques and harnessing their benefits has the potential to make extremely powerful modelling tools

Plant Ecophysiology: Responses to Climate Changes and Stress Conditions Srdjan Stojnic, Nacer Bellaloui, Raul Antonio Sperotto, Yanbo Hu, Georgios Koubouris, Peter Petrik, 2025-10-23 Climate change characterized by amplified frequency and amplitude of heat waves increased evaporative demand and altered precipitation patterns threatening the productivity and stability of ecosystems worldwide Previous research identified a number of abiotic and biotic stressors that affects plant physiology and contributes to natural ecosystems decline as well as crop yield failure Depending on their intensity and duration plant species may display a wide range of strategies and mechanisms to withstand environmental stress including physiological and biochemical responses as well as modulation in structural characteristics such as anatomy and morphology However despite the great progress made

in understanding plant responses and tolerance to environmental stress factors a holistic and systematic knowledge on the effect of multiple simultaneous and or sequential stress factors and their interactions is still lacking In addition climate change imposes the alteration of a series of environmental factors simultaneously as well as intensify the severity of different stressful events such as drought floods salinity and heat waves Therefore knowledge of how plants acclimate to multiple stressors is critical in understanding the effects of future climates on natural ecosystems urban greenery and agroforestry systems i e tree crops interaction worldwide
