Graef, 2011-06-27 First posed by Hermann Weyl in 1910 the limit point limit circle problem has inspired over the last century several new developments in the asymptotic analysis of nonlinear differential equations This self contained monograph traces the evolution of this problem from its inception to its modern day extensions to the study of deficiency indices and analogous properties for nonlinear equations The book opens with a discussion of the problem in the linear case as Weyl originally stated it and then proceeds to a generalization for nonlinear higher order equations En route the authors distill the classical theorems for second and higher order linear equations and carefully map the progression to nonlinear limit point results The relationship between the limit point limit circle properties and the boundedness oscillation and convergence of solutions is explored and in the final chapter the connection between limit point limit circle problems and spectral theory is examined in detail With over 120 references many open problems and illustrative examples this work will be valuable to graduate students and researchers in differential equations functional analysis operator theory and related fields An Elementary Treatise on Differential Equations and Their Applications Henry Thomas Herbert Piaggio, 1921 **Differential Geometry and Applications** Josef Janyška, 1996 *A Treatise on the Theory of Bessel Functions* George Neville Watson, 1922 **Ordinary Differential Equations** Giovanni Sansone, 1978 Reprints of Papers from the Science Laboratories of the University of Sydney, 1916 Reprints
