Gliklikh, 1997 This book is the first in monographic literature giving a common treatment to three areas of applications of Global Analysis in Mathematical Physics previously considered quite distant from each other namely differential geometry applied to classical mechanics stochastic differential geometry used in quantum and statistical mechanics and infinite dimensional differential geometry fundamental for hydrodynamics The unification of these topics is made possible by considering the Newton equation or its natural generalizations and analogues as a fundamental equation of motion New general geometric and stochastic methods of investigation are developed and new results on existence uniqueness and qualitative behavior of solutions are obtained **The Astrophysical Journal**, 1928 Letters to the Editor issued as Part 2 and separately paged from v 148 1967
