focuses on seven contemporary challenges that have affected global supply chain management. Recent disruptions to global supply chains created by COVID-19 and the Ukraine conflict have resulted in significant geographical shifts in supply and demand. High inflation and the cost of living crisis have in turn created problems for finely tuned global supply chains. The economic and business environment has also become more demanding due in part to political pressures including nationalism and Brexit. For example, supply chain pressures caused by Brexit have resulted in increased red tape. Other factors have had a gradual and positive effect such as climate change initiatives, Industry 4.0 and the digital revolution. The issues that affect the performance of global supply chains are sometimes interrelated but all of them really matter because businesses have become increasingly global. This book addresses these challenges and explores how to deal with them. In addition, there are new and updated chapters on lean and agile supply chains, e-business, emerging markets, sustainability and green issues, global supply chains for services and event management, retail management and major project management. *Managing Global Supply Chains* is a practical and highly readable text with real-life examples and excellent coverage. It is an ideal companion for post-experience business students, learning professionals and anyone interested in supply chain management.

**The Digital Revolution** Bob Merritt,2016-02-29 As technologists we are constantly exploring and pushing the limits of our own disciplines and we accept the notion that the efficiencies of new technologies are advancing at a very rapid rate However we rarely have time to contemplate the broader impact of these technologies as they impact and amplify adjacent technology disciplines This book therefore focuses on the potential impact of those technologies but it is not intended as a technical manuscript In this book we consider our progress and current position %toward on arbitrary popular concepts of future scenarios rather than the typical measurements of cycles per second or milliwatts We compare our current human cultural situation to other past historic events as we anticipate the future social impact of rapidly accelerating technologies We also rely on measurements based on specific events highlighting the breadth of the impact of accelerating semiconductor technologies rather than the specific rate of advance of any particular semiconductor technology These measurements certainly lack the mathematic precision and repeatability to which technologists are accustomed but the material that we are dealing with the social objectives and future political structures of humanity does not permit a high degree of mathematic accuracy Our conclusion draws from the concept of Singularity It seems certain that at the rate at which our technologies are advancing we will exceed the ability of our post Industrial Revolution structures to absorb these new challenges and we cannot accurately anticipate what those future social structures will resemble
