

Networks

A network is a set of devices connected by communication links. A node can be a computer, printer or any other device capable of sending and/or receiving data generated by other nodes on the network.

"Computer network" to mean a collection of autonomous computers interconnected by a single technology. Two computers are said to be interconnected by a single technology. Even if they are able to exchange information.

The connection need not be via a copper wire, fiber optics, microwaves, infrared and communication satellites can also be used.

Networks come in many sizes, shapes and forms, as we will see later. They are usually connected together to make a large network for eg-Internet.

There is considerable confusion in computer network and distributed system.

Difference between Distributed System and Computer network.

Computer Network

1. Each computer has its individual existence. Eg Telnet, FTP

Distributed System

a collection of independent computers appears to its users as a single coherent system.

Eg - World Wide Web
