Digital Techniques In Broadcasting Transmission:

Digital Techniques in Broadcasting Transmission Robin Blair, 1999 Most professional engineers working in broadcast transmission have been trained in the analog techniques used in the industry until now Engineers who are familiar with analog TV broadcast systems are now faced with designing operating and maintaining digital TV systems Conversely few engineers skilled in digital communication have experience in the high power and high voltage techniques demanded in broadcasting transmission *Digital Techniques in Broadcast Transmission* is a practical reference guide for the broadcast engineer to make the transition from analog to digital Emphasis is on digital communication at the level of the practicing broadcast engineer and the application of digital principles to high powered broadcast transmission This book provides in an easy to understand comprehensive manner the information required to educate engineers about the intricacies of digital television signal transmission Engineers and managers involved in technical transmission issues will find this an essential resource to simplify the transition from analog to digital and will not want to be without this book

Digital Terrestrial Television Broadcasting Paul Dambacher, 2012-12-06 In the past decades traditional television broadcasting has been an autonomous field which was largely independent of the world of telecommunications and computers The analog television standards PAL SECAM and NTSC have remained almost untouched with regard to their picture information Whatever development took place was essentially in support of programming and was based on the existence of a certain redundancy in the representation of the signal in the time and frequency domain In the 70s for example the teletext system was introduced throughout Europe A further supplementary digital service in television introduced in the early 80s was the Video Programme System VPS which utilizes part of the TV data line and ensures that programmes can be recorded with the correct timing on video recorders even when the programmes are delayed There is no doubt that as far as the transmission from the studio to the viewer is concerned the future belongs to digital video broadcasting DVB which is about to be implemented in the satellite cable and terrestrial radio transmission media The European DVB Project finalized its specification for channel coding and modulation for the digital broadband transmission channels at the beginning of 1996
