This book is invaluable for teachers and students in high school and junior college who struggle to understand the principles of modern physics and incorporate scientific methods in their lessons. It provides interactive and multidisciplinary approaches that will help prepare present and future generations to face the technological and social challenges they will face. Rather than using a unidirectional didactic approach, the authors—scientists, philosophers, communication experts, science historians, and science education innovators—divide the book into two parts: the first part, *Communicating Contemporary Physics*, examines how new physics developments affect modern culture, while the second part, *Digital Challenges for Physics Learning*, covers physics education research using ICT plus the experiences of classroom teachers and a range of ideas and projects to innovate physics and STEM teaching.

Yet aside from journalistic accounts, this industry has not so far been studied in depth. Richard Heeks provides the first critical analysis of the development of India's software industry and the impact on it of the recent policy of liberalisation in the areas of trade, state intervention, and foreign investment. The study is located at the intersection of three major trends witnessed in the nineties: the increasing importance of computer software in all aspects of business; the mounting global search for outsourcing services and manufacture on the part of multinational companies; and the growing dominance of neo-liberal policy models inspired by the World Bank and the IMF.
