Computational Analysis Of Polymer Processing:

Computational Analysis of Polymer Processing J.R.A. Pearson, S.M. Richardson, 2011-11-11 Large fast digital computers have been widely used in engineering practice and their use has had a large impact in many fields Polymer processing is no exception and there is already a substantial amount of literature describing ways in which processes can be analysed designed or controlled using the potentialities of modern computers The emphasis given varies with the application and most authors tend to quote the results of their calculations rather than describing in any detail the way the calculations were undertaken or the difficulties experienced in carrying them out We aim to give here as useful and connected an account as we can of a wide class of applications for the benefit of scientists and engineers who find themselves working on polymer processing problems and feel the need to undertake such calculations The major application we have in mind is the simulation of the dynamics of the various physical phenomena which arise in a polymer process treated as a complex engineering system This requires that the system be reasonably well represented by a limited number of relatively simple subprocesses whose connections can be clearly identified that the dominant physical effects relevant to each subprocess can be well defined in a suitable mathematical form and that the sets of equations and boundary conditions developed to describe the whole system can be successfully discretised and solved numerically

Computer Modelling of Polymer Processing E. Andreassen, Å Larsen, E. L. Hinrichsen, 1992 The use of computers to numerically analyse polymer processing was first reported as far back as the 1950 s and the first commercial software became available around 20 years ago Much research has been carried out since that time and this report aims to summarise contemporary trends in both

commercial and academic research and development An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading
