PATS-1 George Patton Lohmann, 1980 PATS 1 is the first version of a package of computer programs and subroutines written or acquired specifically for the archiving analysis and presentation of marine micropaleontological data The aim of this report is to document the procedures and programs incorporated in PATS 1 and make them available to colleagues working on closely related research problems The program package described in this report is not intended to be either comprehensive or generally useful Rather the PATS 1 package was assembled for a specific purpose It reflects the solutions to problems encountered in the course of my own work in micropaleontological oceanography Some programs are so strictly tailored to my own research that they may have to be modified to be of any use to others However where convenient I have tried to generalize programs especially in design of the subroutines incorporated into the PATS 1 LIBRARY This report provides program listings documentation examples and

period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents.
