

# DIGITAL COMPUTER:

- Consists of electronic components and electromechanical devices.
- These components can maintain only two discrete states (i.e high voltage/low voltage or ON/OFF).
- The word digital implies that the information in the computer is represented by variables that take a finite number of discrete values (0 or 1).
- By using various coding techniques (groups of bits) can be made to represent not only binary numbers but also other decimal digits, letters, or meaningful symbols
- Digital computer's functions are:
  - General Purpose machine
  - more reliable and accurate results.
  - Count Quantities rather than measuring
  - Input / Output in digits as well as in graphical form.
