Computer Science A. I. Forsythe, 1975 *Computer Science* Alexandra I. Forsythe, 1978 *Computer Science* , 1975
A First Course in Computer Science with Modula-2 Lewis J. Pinson, Richard Sincovec, Richard Wiener, 1987 This introduction to the discipline of computer science presents the entire Modula 2 programming language at a beginning level. The authors stress the art of problem solving on the students part and they reveal Modula 2 s ability to separate a concept from its implementation. This is one of the first books to present data abstraction in software engineering and top down problem decomposition at an introductory level. Many program listings are contained along with the inclusion of examples and problems from many major areas of computer science. Chapter coverage includes problem solving and algorithms simple programs and their structure data types and control structures subprograms pointer variables and dynamic storage allocation functional and data abstraction with Modula 2 recursion scope and visibility within internal modules and problem solving using low level programming in Modula 2 *A First Course in Scientific Computing* Rubin Landau, 2011 This book offers a new approach to introductory scientific computing. It aims to make students comfortable using computers to do science to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers and to show how all the pieces can work together. Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems from energy use to the building of skyscrapers to projectile motion with drag. He is attentive to how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract. Landau covers the basics of computation numerical analysis and programming from a computational science perspective. The first part of the printed book uses the problem solving environment Maple as its context with the same material covered on the accompanying CD as both Maple and Mathematica programs. The second part uses the compiled language Java with equivalent materials in Fortran90 on the CD and the final part presents an introduction to LaTeX replete with sample files. Providing the essentials of computing with practical examples. *A First Course in Scientific Computing* adheres to the principle that science and engineering students learn computation best while sitting in front of a computer book in hand in trial and error mode. Not only is it an invaluable learning text and an essential reference for students of mathematics engineering physics and other sciences but it is also a consummate model for future textbooks in computational science and engineering courses. A broad spectrum of computing tools and examples that can be used throughout an academic career. Practical computing aimed at solving realistic problems. Both symbolic and numerical computations. A multidisciplinary approach science math computer science Maple and Java in the book itself Mathematica Fortran90 Maple and Java on the accompanying CD in an interactive workbook format **A First Course in Discrete Mathematics** John C. Molluzzo, Fred Buckley, 1997-01-28 This highly regarded work fills the need for a treatment of elementary discrete mathematics that provides a core of mathematical terminology and concepts as well as
