Computer Architecture Gerrit A. Blaauw, Frederick Phillips Brooks, 1997 In this remarkable book on computer design long known in the field and widely used in manuscript form Gerrit A Blaauw and Frederick P Brooks Jr provide a definitive guide and reference for practicing computer architects and for students The book complements Brooks recently updated classic *The Mythical Man Month* focusing here on the design of hardware and there on software here on the content of computer architecture and there on the process of architecture design The book s focus on architecture issues complements Blaauw s early work on implementation techniques Having experienced most of the computer age the authors draw heavily on their first hand knowledge emphasizing timeless insights and observations Blaauw and Brooks first develop a conceptual framework for understanding computer architecture They then describe not only what present architectural practice is but how it came to be so A major theme is the early divergence and the later reconvergence of computer architectures They examine both innovations that survived and became part of the standard computer and the many ideas that were explored in real machines but did not survive In describing the discards they also address why these ideas did not make it The authors goals are to analyze and systematize familiar design alternatives and to introduce you to unfamiliar ones They illuminate their discussion with detailed executable descriptions of both early and more recent computers The designer s most important study they argue is other people s designs This book s computer zoo will give you a unique resource for precise information about 30 important machines Armed with the factors pro and con on the various known solutions to design problems you will be better able to determine the most fruitful architectural course for your own design 0201105578B04062001
