Blockchain as both ICT and institutional technology Marcel Kleber,2019-10-31 Master s Thesis from the year 2019 in the subject Economics Monetary theory and policy grade 2 0 University of Potsdam language English abstract This thesis explores and analyses the technical and economic factors that determine the potential of blockchain technology for economy and society and their interactions At the technical level blockchain technology is portrayed as a combination of different base technologies It enables new potentially disruptive applications by providing an efficient technical solution for the fundamental double spending problem Based on these findings blockchain technology is analyzed regarding a new Techno economic paradigm However this does not yet appear to be the case at least from an isolated perspective From an institutional economics perspective blockchain technology proves to be a rule based system and thus a basis for alternative institutions On the one hand these enable new forms of economic interaction and coordination and on the other hand these are subject to novel governance mechanisms It turns out that these decentralized blockchain based forms can lead to higher efficiency in systems that have been dependent on traditional intermediaries up to now due to lower transaction costs In contrast there emerge new intermediaries within the blockchain ecosystem which reminds of traditional schemes
