Computer Techniques in Environmental Science Robert P. Ouellette, Richard S. Greeley, J. W. Overbey, 1975-02

Computer Techniques in Environmental Studies IV P. Zannetti, 1992-10-31 This book presents the Proceedings of the Fourth International Conference ENVIROSOFT 92 Since the beginning of this conference cycle in 1986 ENVIROSOFT has provided a forum for discussion and debate for scientists engineers and decision makers involved in the development and application of computer techniques to environmental sciences Our main goal is to provide an opportunity for cross fertilization among the several groups involved in the study of the environment A couple of years ago a reviewer of ENVIROSOFT 90 made a very interesting and appropriate comment He congratulated us for the effort of providing a forum for discussion among environmental scientists but criticized us for maintaining in the proceedings and in the conference schedule a strict division between atmospheric papers water papers etc I agree with the reviewer and in this conference I made an effort to separate the articles not on the basis of their physical medium air water groundwater etc but on the basis of the methods and approaches adopted by the authors Again I hope that this change will improve the dialogue among scientists and in particular the interactions between air and water researchers

Development and Application of Computer Techniques to Environmental Studies X G. Latini, G. Passerini, C. A. Brebbia, 2004 This volume presents the most recent developments and practical implementations in the theoretical numerical and applicable aspects of computer analysis simulation modelling control and forecasting for environmental applications

Development and Application of Computer Techniques to Environmental Studies Darrell W. Pepper, Paolo Zannetti, C. A. Brebbia, 1998 The proceedings of the seventh international conference on this subject

Computer Techniques in Environmental Studies Paolo Zannetti, 1988-10-12 This was the second ENVIROSOFT conference an international meeting dealing with the development and application of computer techniques to environmental problems The goal is to allow cross fertilization among those scientists who are involved in different disciplines but possess two things in common 1 they study environmental phenomena and 2 they use software as a tool The major goal of this conference was to bring these two disciplines a little closer

Computer Generated Physical Properties Stan Bumble, 1999-06-01 Computer Generated Physical Properties offers the environmental scientist a basis to predict the properties of molecules and reengineer them to remove those properties that are harmful to the environment This technology is currently used in other fields and is now becoming popular in the environmental engineering field because of its pollution prevention and waste reduction capabilities

This book interdisciplinary in scope treats the physical properties of matter as generated by computers. It covers a wide variety of topics pointing towards synthesizing new molecules to substitute for reactants, intermediaries, and products in industrial processes with better physical and environmental properties than the original. The author achieves this with a spreadsheet program called SYNPROPS that operates on a PC computer with optimization features. A radar type graph, one for each property, visually sorts the various groups in order of their contribution to the property, creating the necessity for a computer to obtain answers for the structure of the optimum molecules for substitution or synthesis. The author discusses applications to biologically active molecules without side effects, including antineoplastic drugs. Additionally, he demonstrates model compounds and the applications of SYNPROPS optimization and substitution. This book has everything you need to know about deriving properties and combinatorial chemistry from molecular structure.

Computer Techniques in Environmental Studies III Paolo Zannetti, 1990-01-01 Computers in Earth and Environmental Sciences Hamid Reza Pourghasemi, 2021-09-22 Computers in Earth and Environmental Sciences: Artificial Intelligence and Advanced Technologies in Hazards and Risk Management addresses the need for a comprehensive book that focuses on multi-hazard assessments, natural and manmade hazards, and risk management using new methods and technologies that employ GIS, artificial intelligence, spatial modeling, machine learning tools, and meta-heuristic techniques. The book is clearly organized into four parts that cover natural hazards, environmental hazards, advanced tools and technologies in risk management, and future challenges in computer applications to hazards and risk management. Researchers and professionals in Earth and Environmental Science who require the latest technologies and advances in hazards, remote sensing, geosciences, spatial modeling, and machine learning will find this book to be an invaluable source of information on the latest tools and technologies available. Covers advanced tools and technologies in risk management of hazards in both the Earth and Environmental Sciences. Details the benefits and applications of various technologies to assist researchers in choosing the most appropriate techniques for purpose. Expansively covers specific future challenges in the use of computers in Earth and Environmental Science. Includes case studies that detail the applications of the discussed technologies down to individual hazards.

Soft Computing Techniques in Solid Waste and Wastewater Management Rama Rao Karri, R. Gobinath, Mohammad Hadi Dehghani, 2021-07-24 Soft Computing Techniques in Solid Waste and Wastewater Management is a thorough guide to computational solutions for researchers working in solid waste and wastewater management operations.
