Smith, PURDUE UNIV LAFAYETTE IND THERMAL SCIENCES AND PROPULSION CENTER., 1978 **Structure of the Atmospheric Boundary Layer** Zbigniew Sorbjan, 1989 **Boundary Layer Structure** Hadassah Kaplan, Nathan Dinar, 1984-12-31 In this volume we present the lectures given during the 1984 OHOLO Conference held in Zichron Yaacov Israel The Conference was organized by the Israel Institute for Biological Research Department of Mathematics which is involved in Environmental Risk Evaluation and in Projects Estimating the Potential of Wind Energy The lectures cover a broad spectrum of mathematical models ranging from those that deal with the solution of atmospheric conservation equations and to those models that yield empirical estimates based on real time measurements and thus are unique to the locale where measured The goal of the Conference was to allow scientists from various countries to meet and discuss topics of mutual interest including the following 1 Structure of the boundary layer primarily models dealing in the understanding of the various processes of atmospheric energy transfer and their influence on the size and composition of the boundary layer 2 Advanced mathematical techniques for describing flow and diffusion lectures on approximations and techniques for solving the diffusion and transport equations 3 Flow over complex terrain research into various aspects of the problem mathematical models physical models experimental results 4 Models of pollution transport and deposition *Atmospheric Boundary Layer Flows* J. C. Kaimal, John J. Finnigan, 1994 This text gives a simple view of the structure of the boundary layer the instruments available for measuring its mean and turbulent properties how best to make the measurements and ways to process and analyze the data *An Experimental Investigation of the Flow Structure of the Turbulent Boundary Layer* Peter W. Runstadler, Stephen Jay Kline, William C. Reynolds, 1963 A combination of visual and quantitative measurements is presented providing a physical picture of the turbulent boundary layer flow structure on a flat plate The flow structure is shown to consist of three zones each zone has a one to one correspondence to the well known regions of the u y mean velocity profile A wall layer region is shown to exist below y 10 An apparently fully turbulent region exists corresponding to the logarithmic law of the wall and the buffer region An intermittent zone appears to agree closely with the wake deviation region An entirely new result of the investigation is the delineation of the structure of the wall layer region This region is shown to contain a relatively regular structure of low and high velocity fluid streaks alternating in the span direction together with the ejection of low momentum fluid into the outer flow Correlations are given for the rate of ejection and the streak spacing A qualitative description of other features of the wall layer region and the character of the remainder of the boundary layer flow structure is presented Author **Coherent Structures in Complex Systems** D. Reguera, L.L. Bonilla, J.M. Rubi, 2008-01-11 A rich variety of real life physical problems which are still poorly understood are of a nonlinear nature Examples include turbulence granular flows detonations and flame propagation fracture

dynamics and a wealth of new biological and chemical phenomena which are being discovered Particularly interesting among the manifestations of nonlinearity are coherent structures This book contains reviews and contributions reporting on the state of the art regarding the role of coherent structures and patterns in nonlinear science *Boundary Layer Structure in Turbulent Rayleigh-Bénard Convection* Nan Shi, Mohammad S. Emran, Jörg Schumacher, 2014 **Further Developments in Turbulence Management** K. Krishna Prasad, 2012-12-06 The thrust of modern research on turbulence in fluids is concerned with coherent structures and modelling Riblets have been shown to reduce drag and the papers presented in this volume tackle the main question of the mechanism responsible for this behaviour in turbulent flow The contributions in this volume were presented at the Sixth Drag Reduction Meeting held at Eindhoven during November 1991 This volume will be a useful reference work for engineers physicists and applied mathematicians interested in the topic of fluid turbulence **Scientific and Technical Aerospace Reports**, 1987 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **A Study of Turbulent Boundary Layer Structure**, 1986 The purpose of this investigation was to complete analysis of space time correlation measurements of two velocity components in the wall region of a turbulent pipe flow The third component was obtained from continuity and eigenfunctions of the cross spectral density tensor extracted Keywords Large eddies Turbulent boundary layer **Laminar Boundary Layers** Louis Rosenhead, 1988 This book is sure to be of interest to the many different types of specialists who now make use of the ideas methods and results boundary layer theory including applied mathematicians and engineers as well as experimental physicists and chemists working in fields as diverse as aerodynamics hydraulics meteorology oceanography and heat and mass transfer **Boundary-layer Structure Over the Tropical Ocean** David Roy Fitzjarrald, 1980 **The Effects of Streamwise Concave Curvature on Turbulent Boundary Layer Structure** Albert H. Jeans, J. P. Johnston, James P. Johnston, 1982 Concave curvature has a relatively large unpredictable effect on turbulent boundary layers Some but not all previous studies suggest that a large scale stationary array of counter rotating vortices exists within the turbulent boundary layer on a concave wall The objective of the present study was to obtain a qualitative model of the flow field in order to increase our understanding of the underlying physics A large free surface water channel was constructed in order to perform a visual study of the flow Streamwise components of mean velocity and turbulence intensity were measured using a hot film anemometer The upstream boundary was spanwise uniform with a momentum thickness to radius of curvature of 0.05 Compared to flat wall flow large scale randomly distributed sweeps and ejections were seen in the boundary layer on the concave wall The sweeps appear to suppress the normal mechanism for turbulence production near the wall by inhibiting the bursting process The ejections appear to enhance turbulence production in the outer layers as the low speed fluid convected from regions near the wall interacts with the higher speed fluid farther out The large scale structures did not occur at fixed spanwise locations and could not be called
