Principles and Practice of Ground Improvement Jie Han,2015-05-26 Gain a stronger foundation with optimal ground improvement Before you break ground on a new structure you need to analyze the structure of the ground Expert analysis and optimization of the geo materials on your site can mean the difference between a lasting structure and a school in a sinkhole Sometimes problematic geology is expected because of the location but other times it s only unearthed once construction has begun You need to be able to quickly adapt your project plan to include an improvement to unfavorable ground before the project can safely continue Principles and Practice of Ground Improvement is the only comprehensive up to date compendium of solutions to this critical aspect of civil engineering Dr Jie Han registered Professional Engineer and preeminent voice in geotechnical engineering is the ultimate guide to the methods and best practices of ground improvement Han walks you through various ground improvement solutions and provides theoretical and practical advice for determining which technique fits each situation Follow examples to find solutions to complex problems Complete homework problems to tackle issues that present themselves in the field Study design procedures for each technique to simplify field implementation Brush up on modern ground improvement technologies to keep abreast of all available options Principles and Practice of Ground Improvement can be used as a textbook and includes Powerpoint slides for instructors It s also a handy field reference for contractors and installers who actually implement plans There are many ground improvement solutions out there but there is no single right answer to every situation Principles and Practice of Ground Improvement will give you the information you need to analyze the problem then design and implement the best possible solution

Yue,2001-01-01 This volume contains seven keynote lectures and over 100 technical contributions by scientists researchers engineers and students from more than 25 countries and regions worldwide on the subject of soft soil engineering

Advances in Frontier Research on Engineering Structures Volume 2 Yang Yang,Sudharshan N. Raman,Bingxiang Yuan,Zhijun Xu,2023-02-08 Advances in Frontier Research on Engineering Structures focuses on the research of advanced structures and anti seismic design in civil engineering The proceedings present the most cutting edge research directions and achievements related to civil and structural engineering Topics covered in the proceedings include Engineering Structure and Seismic Resistance Structural Mechanics Analysis Components and Materials Structural Seismic Design 3D Printing Concrete Other Related Topics The works of this proceedings will promote development of civil and structural engineering resource sharing flexibility and high efficiency Thereby promote scientific information interchange between scholars from the top universities research centers and high tech enterprises working all around the world

Static and Dynamic Performance Analysis of Structures and Materials Under Complex Loads and Environmental Excitation Ping Xiang,Abdelmoumen Anis Bousahla,Huaping Wang,Adesola

Ademiloye,2025-05-29 With the development of structural materials more and more new materials and construction methods are applied to infrastructure construction in order to achieve carbon neutrality and emission peak Nowadays people have more and more strict requirements for the comfort safety and resistance to environmental disasters of infrastructure Therefore the static and dynamic performance of new structures and materials under complex environment and load becomes more and more important in construction and design of infrastructure engineering Modern civil engineering has been developing towards intelligence Both construction technology and material technology are developing towards a more intelligent direction How to take new means to make the structure have good mechanical performance and can sense the external environment and load excitation is a development direction of civil engineering This Research Topic welcomes researches on the macro and micro mechanical performance analysis of materials static and dynamic response analysis of structures in construction engineering bridge engineering railway engineering and geotechnical engineering In addition under the action of wind load and earthquake load the large scale vibration of structures will seriously endanger the safety The safety and stability performances of infrastructures still represent a serious challenge to researchers engineers and constructors This Research Topic is dedicated to the most recent advances in research into the mechanical performances of structures and materials and some related applications We welcome scientists and investigators to contribute Original Research and Review articles addressing the main issues facing the field Potential topics include but are not limited to the following New theoretical numerical and experimental methods for vibration of structures Assessment of dynamic responses of infrastructures under static and dynamic loads Innovative design and mechanical performances of composite structures Intelligent structural health monitoring with optical fiber sensing technology Mechanical performances of structures and materials from micro to macro scales Mechanism of vehicle bridge coupling vibration Structural fatigue performance analysis under earthquakes Infrastructure innovations for durability and resilience with new structure system and materials Dynamic evolution of structural damage under extreme loads such as earthquake typhoon and impact Structural health monitoring of large scale infrastructures Numerical modelling and computational mechanical analysis of structures and infrastructures

Ground and Soil Improvement Chris Raison,2004-03-07 Methods for improving ground and soil have undergone significant developments in recent years particularly in terms of application and usage and many innovative techniques have been introduced However it is of significance that in many areas the design process still lacks a theoretical framework The papers included in this volume written by international authors deal with a cross section of problems faced by many practising engineers and provide advice and guidance on how these problems can be dealt with in a practical manner
