Ceramic Microstructures '86 Joseph A. Pask,Anthony G. Evans,2013-11-11 The Proceedings of the International Materials Symposium on Ceramic Microstructures 86 Role of Interfaces presents a comprehensive coverage of the past decade s advances in ceramic science and technology related to microstructures The term microstructure is used in the broad sense and is synonymous with char cter Character is defined as a complete detailed description of chemical and physical characteristics of a material This symposium is the third in a series held every ten years on ceramic microstructures The first symposium in 1966 had as a subtitle Their Analysis Significance and Production and emphasized the need and importance of characterization in order to fully understand the chemical and physical properties of materials The second Symposium in 1976 placed emphasis on the exploration of characters most suited and needed for Energy Related Applications By the time of that conference the sequence of processing characterization properties was fully accepted It was recognized that characterization was the basis of materials science the objective of processing was to produce a desired character that was considered necessary to realize a given property or behavior To further emphasize the importance of character the symposium dealt primarily with the property character coupling

Metal-Ceramic Interfaces M. Rühle, A.G. Evans, J.P. Hirth, Michael F. Ashby, 2013-10-22 As engineering materials and structures often contain a metal or metallic alloy bonded to a ceramic the resultant interface must be able to sustain mechanical forces without failure They also play an important role in oxidation or reduction of materials The workshop on Bonding Structure and Mechanical Properties of Metal Ceramic Interfaces was held in January 1989 within the Acta Scripta Metallurgica conference series It drew together an international collection of 70 scientists who discussed a wide range of issues related to metal ceramic interfaces The sessions were divided into 7 categories structure and bonding chemistry at interfaces formation of interfaces structure of interfaces thermodynamics atomistics of interface fracture mechanics of interface cracks and fracture resistance of bimaterial interfaces Within these headings attention was paid to grain boundaries the influence of chemical processes on the behaviour of interfaces diffusion bonding characterization of fracture and crack propagation by fatigue and by stress corrosion The book presents a useful reference source for materials scientists physicists chemists and mechanical engineers who are concerned with the roles and properties of interfaces
