## **Designing High-Density Cities**

Edward Ng, 2009-12-16 Compact living is sustainable living High density cities can support closer amenities encourage reduced trip lengths and the use of public transport and therefore reduce transport energy costs and carbon emissions High density planning also helps to control the spread of urban suburbs into open lands improves efficiency in urban infrastructure and services and results in environmental improvements that support higher quality of life in cities Encouraging even requiring higher density urban development is a major policy and a central principle of growth management programmes

used by planners around the world. However, such density creates design challenges and problems. A collection of experts in each of the related architectural and planning areas examines these environmental and social issues and argues that high density cities are a sustainable solution. It will be essential reading for anyone with an interest in sustainable urban development.

*Evaluation of Urban Ecological Security and Measurement of Urban Ecological Resilience* Xueru Zhang, Wei Song, Hualin Xie, Jinmei Lu, 2024-05-29. Since the middle of the last century, rapid population growth and urbanization have led to the encroachment of a large number of natural spaces, resulting in a series of ecological security issues such as environmental pollution, resource depletion, and habitat destruction, which have severely challenged global sustainable development. Urban ecological security is an important barrier to urban residents' production and life, the foundation and core of national or regional ecological security, and it is of great significance to promote green development and harmonious coexistence between humans and nature. With global warming, frequent natural disasters, and other multifactorial threats, the issue of ecological security in cities as centers of settlement has become a focus of international attention. However, cities are complex systems with social, economic, and natural conditions coupled with each other. Under the overlapping of many factors, the basic problems such as the mechanism of urban development on ecological security have not been fully explained, and there is also a lack of quantitative assessment methods corresponding to urban ecological conditions, let alone simulation and prediction.

[The China Factor](#) Shantanu Roy-Chaudhury, 2022-12-29. India's relations with China are at a crossroads. Apart from examining the complex and dynamic bilateral relations, it is equally important to highlight the nuances of China's engagement with the countries in India's neighbourhood and understand the strategic implications that arise for New Delhi. Shantanu Roy-Chaudhury's *The China Factor* explores Beijing's political, economic, and defence relations with Sri Lanka, Maldives, Bangladesh, and Myanmar, and weighs the dividends of the bilateral relationships to better comprehend the geopolitical subtleties in the region. The book subsequently draws out the implications for India, illuminates New Delhi's engagement with its neighbours, and suggests policy recommendations for a way forward. Drawing from diverse sources, including government documents and literature from India, China, and the countries being studied, along with interviews with serving and former officials, *The China Factor* offers a detailed investigation into China's engagement with India's neighbourhood, which necessitates a deeper understanding as New Delhi manoeuvres the tectonic shifts in its external environment.
