Coding Theory and Algebraic Geometry Henning Stichtenoth, Michael A. Tsfasman, 2006-11-15 About ten years ago V D Goppa found a surprising connection between the theory of algebraic curves

over a finite field and error correcting codes The aim of the meeting Algebraic Geometry and Coding Theory was to give a survey on the present state of research in this field and related topics The proceedings contain research papers on several aspects of the theory among them Codes constructed from special curves and from higher dimensional varieties Decoding of algebraic geometric codes Trace codes Exponential sums Fast multiplication in finite fields Asymptotic number of points on algebraic curves Sphere packings

Introduction to Coding Theory Jurgen Bierbrauer, 2004-08-17 Although its roots lie in information theory the applications of coding theory now extend to statistics cryptography and many areas of pure mathematics as well as pervading large parts of theoretical computer science from universal hashing to numerical integration Introduction to Coding Theory introduces the theory of error correcting codes in a thorough but gentle presentation Part I begins with basic concepts then builds from binary linear codes and Reed Solomon codes to universal hashing asymptotic results and 3 dimensional codes Part II emphasizes cyclic codes applications and the geometric description of codes The author takes a unique more natural approach to cyclic codes that is not couched in ring theory but by virtue of its simplicity leads to far reaching generalizations Throughout the book his discussions are packed with applications that include but reach well beyond data transmission with each one introduced as soon as the codes are developed Although designed as an undergraduate text with myriad exercises lists of key topics and chapter summaries Introduction to Coding Theory explores enough advanced topics to hold equal value as a graduate text and professional reference Mastering the contents of this book brings a complete understanding of the theory of cyclic codes including their various applications and the Euclidean algorithm decoding of BCH codes and carries readers to the level of the most recent research

Codes and Designs K. T. Arasu, Akos Seress, 2008-08-22 Following an initiative of the late Hans Zassenhaus in 1965 the Departments of Mathematics at The Ohio State University and Denison University organize conferences in combinatorics group theory and ring theory Between May 18 21 2000 the 25th conference of this series was held Usually there are twenty to thirty invited 20 minute talks in each of the three main areas However at the 2000 meeting the combinatorics part of the conference was extended to honor the 65th birthday of Professor Dijen Ray Chaudhuri This volume is the proceedings of this extension Most of the papers are in coding theory and design theory reflecting the major interest of Professor Ray Chaudhuri but there are articles on association schemes algebraic graph theory combinatorial geometry and network flows as well There are four surveys and seventeen research articles and all of these went through a thorough refereeing process The volume is primarily recommended for researchers and graduate students interested in new developments in coding theory and design theory

Information Theory, Combinatorics, and Search Theory Harout Aydinian, Ferdinando Cicalese, Christian Deppe, 2013-03-09 This volume is dedicated to the memory of Rudolf Ahlswede who passed away in December 2010 The Festschrift contains 36 thoroughly refereed research papers from a memorial symposium which took place in July 2011 The four macro topics of this workshop theory of games and strategic planning combinatorial group testing and database mining

computational biology and string matching information coding and spreading and patrolling on networks provide a comprehensive picture of the vision Rudolf Ahlswede put forward of a broad and systematic theory of search

Coding Theory and Quantum Computing David Evans, 2005 A conference Coding Theory and Quantum Computing was held in Charlottesville VA to provide an opportunity for computer scientists mathematicians and physicists to interact about subjects of common interest This proceedings volume grew out of that meeting It is divided into two parts Coding Theory and Quantum Computing In the first part Harold Ward gives an introduction to coding theory Other papers survey recent important work such as coding theory applications of Grobner bases methods of computing parameters of codes corresponding to algebraic curves and problems in the theory of designs The second part of the book covers a wide variety of directions in quantum information with an emphasis on understanding entanglement The material presented is suitable for graduate students and researchers interested in coding theory and in quantum computing
