aspects relating to mentoring and the necessary evolving competencies that we need to address in today's workforce. This emphasis makes this book unique. The icing on the cake is that all the chapters in this textbook are written by contemporary women leaders; this provides a necessary and unique perspective on the topic of leadership that is long overdue. I highly recommend this textbook to all my colleagues in academia, industry, and government.

Dinesh Verma, Ph.D., Professor, Systems Engineering School of Systems and Enterprises, Executive Director, Systems Engineering Research Center (SERC), Stevens Institute of Technology, Hoboken, NJ 07030.

The past decade has seen a dramatic increase in the number of women who are formally recognized in systems engineering, technical management, and leadership positions in all sectors. With industry, academia, professional systems engineering societies, and publishers enabling and illuminating the growing and substantial contributions of women in engineering, women have unprecedented opportunities today to contribute to systems engineering in both leadership and management positions. This volume, a compendium of chapters written by enterprising international women leaders at various stages in their career, addresses diverse topics such as leadership, management, empowerment, equity, diversity, inclusion, and mentoring. It is a valuable resource for engineering management courses in academia, systems engineering leadership training in industry, and Diversity, Equity, and Inclusion program development by Human Resource departments in industry, academia, and government.

**Design Thinking Research** Christoph Meinel, Larry Leifer, 2022-09-07. Extensive research conducted by the Hasso Plattner Design Thinking Research Program at Stanford University in Palo Alto, California, USA, and the Hasso Plattner Institute in Potsdam, Germany, has yielded valuable insights on why and how design thinking works. The participating researchers have identified metrics, developed models, and conducted studies which are featured in this book and in the previous volumes of this series. This volume provides readers with tools to bridge the gap between research and practice in design thinking with varied real-world examples. Several different approaches to design thinking are presented in this volume. Acquired frameworks are leveraged to understand design thinking team dynamics. The contributing authors lead the reader through new approaches and application fields and show that design thinking can tap the potential of digital technologies in a human-centered way. It also presents new ideas in neurodesign from Stanford University and the Hasso Plattner Institute in Potsdam, inviting the reader to consider newly developed methods and how these insights can be applied to different domains. Design thinking can be learned. It has a methodology that can be observed across multiple settings, and accordingly, the reader can adopt new frameworks to modify and update existing practice. The research outcomes compiled in this book are intended to inform and provide inspiration for all those seeking to drive innovation, be they experienced design thinkers or newcomers.
