Communicating Process Architecture:

Communicating Process Architectures 2008 P. H. Welch, 2008 Communicating Process Architectures 2008 contains the proceedings of the thirty first Communicating Process Architectures Conference CPA 2008 organized under the auspices of WoTUG and the Department of Computer Science of the University of York The aim of this book is to cover both theoretical aspects and industrial applications of Communicating Processes Two invited speakers have given excellent contributions to this topic Professor Samson Abramsky has worked in the areas of semantics and logic of computation and concurrency His work on game semantics considers interaction and information flow between multiple agents and their environment This has yielded new approaches to compositional model checking and to analysis for programs with state concurrency probability and other features Professor Colin O Halloran has been instrumental in the uptake of formal methods in the development and verification of high assurance systems on an industrial scale His research interests are in automating the use of formal methods and using these techniques at reasonable cost and on an industrial scale

Communicating process architecture , **Communicating Process Architectures 2007** Alistair A. McEwan, 2007 Deals with Computer Science and models of Concurrency This title emphasizes on hardware software co design and the understanding of concurrency that results from these systems It includes a range of papers on this topic from the formal modeling of buses in co design systems through to software simulation and development environments **Communicating Process Architectures 2005** J.F. Broenink, H.W. Roebbers, J.P.E. Sunter, 2005-09-09 Modern computing systems work when all components are correct by design and can be combined to achieve scalability This publication offers refereed papers covering various aspects such as system design and implementation tools concurrent programming languages libraries and run time kernels and formal methods and applications Communicating Process Architectures 2009 , 2009 This book is a collection of the papers presented at the 32nd Communicating Process Architecture conference CPA held at the Technical University Eindhoven the Netherlands from the 1st to the 4th of November 2009 Concurrency is a fundamental mechanism of the universe existing in all structures and at all levels of granularity To be useful in this universe any computer system has to model and reflect an appropriate level of abstraction For simplicity therefore the system needs to be concurrent so that this modeling is obvious and correct Today the commercial reality of multicore processors means that concurrency issues can no longer be ducked if applications are going to be able to exploit more than an ever diminishing fraction of their power This is a second but very forceful reason to take this subject seriously We need theory and programming technology that turns this around and makes concurrency an elementary part of the everyday toolkit of every software engineer This is what these proceedings are all about Subjects covered in this volume include system design and implementation for both hardware and software tools for concurrent programming languages libraries and run time kernels and formal methods and applications
