Compactification Of Siegel Moduli Schemes:

Compactification of Siegel Moduli Schemes Ching-Li Chai, 1985-12-12 The main result of this monograph is to prove the existence of the toroidal compactification over \mathbb{Z} 1 2 [Compactification of Siegel Moduli Schemes](#) Ching-Li Chai, 1985-12-12 The Siegel moduli scheme classifies principally polarized abelian varieties and its compactification is an important result in arithmetic algebraic geometry The main result of this monograph is to prove the existence of the toroidal compactification over \mathbb{Z} 1 2 This result should have further applications and is presented here with sufficient background material to make the book suitable for seminar courses in algebraic geometry algebraic number theory or automorphic forms

Arithmetic Compactifications of PEL-type Shimura Varieties Kai-Wen Lan, 2013-03-24 By studying the degeneration of abelian varieties with PEL structures this book explains the compactifications of smooth integral models of all PEL type Shimura varieties providing the logical foundation for several exciting recent developments The book is designed to be accessible to graduate students who have an understanding of schemes and abelian varieties PEL type Shimura varieties which are natural generalizations of modular curves are useful for studying the arithmetic properties of automorphic forms and automorphic representations and they have played important roles in the development of the Langlands program As with modular curves it is desirable to have integral models of compactifications of PEL type Shimura varieties that can be described in sufficient detail near the boundary This book explains in detail the following topics about PEL type Shimura varieties and their compactifications A construction of smooth integral models of PEL type Shimura varieties by defining and representing moduli problems of abelian schemes with PEL structures An analysis of the degeneration of abelian varieties with PEL structures into semiabelian schemes over noetherian normal complete adic base rings A construction of toroidal and minimal compactifications of smooth integral models of PEL type Shimura varieties with detailed descriptions of their structure near the boundary Through these topics the book generalizes the theory of degenerations of polarized abelian varieties and the application of that theory to the construction of toroidal and minimal compactifications of Siegel moduli schemes over the integers as developed by Mumford Faltings and Chai *Smooth Compactifications of Locally Symmetric Varieties* Avner Ash, Peter Scholze, 2010-01-14 The new edition of this celebrated and long unavailable book preserves the original book's content and structure and its unrivalled presentation of a universal method for the resolution of a class of singularities in algebraic geometry **Geometric Invariant Theory** David Mumford, John Fogarty, Frances Kirwan, 1994-03-29 This standard reference on applications of invariant theory to the construction of moduli spaces is a systematic exposition of the geometric aspects of classical theory of polynomial invariants This new revised edition is completely updated and enlarged with an additional chapter on the moment map by Professor Frances Kirwan It includes a fully updated bibliography of work in this area **Theta Functions-Bowdoin 1987, Part 2** Leon Ehrenpreis, 1989

Arithmetic Groups and Their Generalizations Lizhen Ji, 2008 In one guise or another many mathematicians are familiar

with certain arithmetic groups such as \mathbf{Z} or $\mathrm{SL}_n(\mathbf{Z})$. Yet many applications of arithmetic groups and many connections to other subjects within mathematics are less well known. Indeed arithmetic groups admit many natural and important generalizations. The purpose of this expository book is to explain through some brief and informal comments and extensive references what arithmetic groups and their generalizations are why they are important to study and how they can be understood and applied to many fields such as analysis geometry topology number theory representation theory and algebraic geometry. It is hoped that such an overview will shed a light on the important role played by arithmetic groups in modern mathematics.

New York Number Theory Seminar started its regular meeting in January 1982. The Seminar has been meeting on a regular basis weekly during the academic year since then. The meeting place of the seminar is in midtown Manhattan at the Graduate School and University Center of the City University of New York. This central location allows number theorists in the New York metropolitan area and visitors an easy access. Four volumes of the Seminar proceedings containing expanded texts of Seminar's lectures had been published in the Springer's Lecture Notes in Mathematics series as volumes 1052 (1984), 1135 (1985), 1240 (1987) and 1383 (1989). Seminar co chairmen are pleased that some of the contributions to the Seminar opened new avenues of research in Number Theory and related areas. On a historical note one of such contributions proved to be a contribution by P. Landweber. In addition to classical and modern Number Theory this Seminar encourages Computational Number Theory. This book presents a selection of invited lectures presented at the New York Number Theory Seminar during 1989-1990. These papers cover wide areas of Number Theory particularly modular functions Algebraic and Diophantine Geometry and Computational Number Theory. The review of C. L. Chai presents a broad view of the

moduli of Abelian varieties based on recent work of the author and many other prominent experts This provides the reader interested in Diophantine Analysis with access to state of the art research The paper of D V and G V *Arithmetical Compactification of Mixed Shimura Varieties* Richard Pink,1989 *Automorphic Forms, Shimura Varieties, and L-functions* Laurent Clozel,J. Fesenko,2006 This volume is dedicated to Professor John H Coates an outstanding contributor to number theory both through his pioneering and fundamental mathematical works and through the magnificent mathematical school he has established It contains 24 articles written by 38 authors on a wide range of topics in the cutting edge of research in number theory algebraic geometry and analysis zeta functions and L functions automorphic and modularity issues Galois representations arithmetic of elliptic curves Iwasawa theory noncommutative Iwasawa theory and p adic analysis This volume will be of interest to researchers and students in these and neighboring fields Information for our distributors A publication of the Documenta Mathematica The AMS distributes this series beginning with volume 3 in the United States Canada and Mexico **Formes Automorphes (I): Questions about slopes of modular forms** Centre Émile Borel,2005 This volume is the first of a series of two devoted to automorphic forms from a geometric and arithmetic point of view They also deal with certain parts of the Langlands program The themes treated in this volume include p adic modular forms the local Langlands correspondence for GL_n the cohomology of Shimura varieties their reduction modulo p and their stratification by Newton polygons The book is suitable for graduate students and research mathematicians interested in number theory algebra and algebraic geometry **Journal of Algebraic Geometry** ,1992 **Simon Stevin** ,1987 **The Zeta Functions of Picard Modular Surfaces** Université de Montréal.
