Perkins, 1980 *Glossary of Cable Logging Terms* United States. Forest Service, 1969 **Cable Logging Systems** (Italia). FAO (Roma, 1981) Forests which have a great potential source of income in developing countries can and often do provide badly needed employment opportunities for rural people. In the recent past and even today tractor skidding was the logging technique mostly used in tropical mechanized logging. However as forest development moves up to hinterland where the terrain is often too steep for tractor skidding cable logging is often more advantageous not for productivity but also often for soil conservation. The effects of any logging system on the residual stand can have a bearing on which of any system to use. Cable logging was primarily developed in central Europe and introduced into and redeveloped in North America and Japan according to their own forest conditions. This manual is designed to give reader an overall picture of the different major cable logging systems being manufactured at this and how these systems compare with each other. The most important aspect in trying to achieve this goal has been to describe all systems in a similar manner in order that the reader can directly compare the systems and determine which systems are appropriate for a given set of conditions.

Analysis of Intermediate Support Cable Logging Systems James W. Charland, 1997 The forest products industry often uses intermediate support cable logging systems to transport logs from the harvest site to a staging area. A method is presented to assist in the analysis and design of these cable systems. The method determines tensions in individual cables, forces on and stresses in the support trees and the geometry of the system under load. Static equilibrium and cable length compatibility are used to generate a system of simultaneous equations. This system of coupled non linear algebraic equations is solved numerically using the Newton Raphson algorithm. A good automated initial guess for the unknown quantities based

on the physics of the problem is provided A model of an example intermediate support cable logging system is analyzed by the proposed approach and the resulting behavior discussed The method includes the effects of catenary sag and elastic stretch in the cables and elastic behavior in the support trees Friction is ignored in the formulation The catenary and elastic stretch methodologies for the cables are each demonstrated on a single cable span as well as on a demonstration cable system The effect of the support tree flexibility and cable mass are found to be significant on the response of the cable logging system The effects of elastic stretch in the cables is not found to be significant for the cable logging systems considered
