Calcium Cell Cycles And Cancer:

Calcium in Cell Cycles and Cancer James F. Whitfield, 1995-04-24 The second edition of *Calcium in Cell Cycles and Cancer* presents a unique overview of calcium's roles in the several stages of cell cycles initiated by signals from voltage receptors and other kinds of growth factor receptors This book integrates the actions of calcium and its partner cyclic AMP with those of the growing family of newly discovered stage specific cyclin dependent protein kinases of the cell cycle engine The book also shows calcium to be a terminal ultimately apoptogenic differentiator of colon and skin cells as well as a major player in lymphocyte selection activation and proliferation This edition relates and explains the dramatic changes in calcium's involvement in the cell cycle and the triggering of terminal differentiation programs that happen during carcinogenesis and are important keys to understanding cancer

Calcium James F. Whitfield, 1997-01-01 To understand cancer we must know how Ca^{2+} drives cell cycles and how and why cells lose Ca^{2+} control while climbing the steps to cancer This book presents a much needed and concise but wide ranging overview of what we know about the several different roles of Ca^{2+} in starting and subsequently driving the major cell cycle transitions Also explored is the differentiation apoptosis diffpoptosis of two exemplary cell systems colon and skin The information should inspire the reader to become intrigued about the possibilities on the horizon for Ca^{2+} in cancer research The main goal of the book is to encourage young readers to follow the tantalizing leads presented and continue their research in the field

Steroid Hormones and Cell Cycle Regulation Kerry L. Burnstein, 2002-05-31 From the tissue culture dish to genetically modified mice this volume explores the long recognized role of steroid hormones in regulating cell proliferation and differentiation Many striking effects of steroid hormones are apparent during development and neoplasia and these topics are covered extensively Several chapters address the pharmacological uses of steroid and related hormones their analogs and antagonists in controlling growth of endocrine cancers This book also highlights the complex role of cross talk between steroid hormones and signals initiated at the cell surface in the regulation of cell cycle in hormone responsive tissues

Calcium Signalling in Cancer G. V. Sherbet, 2000-11-29 Calcium signalling occupies a preeminent position in the signal transduction system of the cell by virtue of its participation in a wide range of physiological functions together with the biological events associated with genetic expression cell proliferation and apoptosis as well as cell differentiation and morphogenesis It is an important feat

Impact of Anesthetics on Cancer Behavior and Outcome Jui-An Lin, Daqing Ma, Szu-Yuan Wu, 2022-06-23

Calcium, Cell Cycles, and Cancer James F. Whitfield, 1990 Whitfield head of the cellular oncology group of the National Research Council of Canada provides a critical and comprehensive survey of the known relationships between calcium cell cycles and cancer A major theme is that calcium works with the regulator cyclic AMP to send five distinct signals that trigger the cycle ending in the cell's nuclear reconstruction This is demonstrated through in depth examinations of various cell cycles On this foundation he presents an extensive discussion of the changes in the signaling mechanisms and the loosening

of their hold on cell cycle events that are key parts of the multistage carcinogenic process Of interest to biochemists cell biologists pharmacologists physiologists and clinicians Annotation copyrighted by Book News Inc Portland OR

The Cell Cycle in the Central Nervous System Damir Janigro,2008-01-23 Cell Cycle in the Central Nervous System overviews the changes in cell cycle as they relate to prenatal and post natal brain development progression to neurological disease or tumor formation Topics covered range from the cell cycle during the prenatal development of the mammalian central nervous system to future directions in postnatal neurogenesis through gene transfer electrical stimulation and stem cell introduction Additional chapters examine the postnatal development of neurons and glia the regulation of cell cycle in glia and how that regulation may fail in pretumor conditions or following a nonneoplastic CNS response to injury Highlights include treatments of the effects of deep brain stimulation on brain development and repair the connection between the electrophysiological properties of neuroglia cell cycle and tumor progression and the varied immunological responses and their regulation by cell cycle

Membranes and Circadian Rythms Thérèse Vanden Driessche,Jean-Luc Guisset,Ghislaine M. Petiau-de Vries,1996 The book shows that cell membranes vary according to the 24h cycle it deals with circadian changes in membrane composition principally the plasma membrane and with structural organization changes in some chloroplast thylakoids The book deals with changes in activity or efficiency of pumps channels photo and hormone receptors in sensitivity towards external signals in sensitivity to some drugs including anaesthetics and in changes in signal transduction The cell cycle is discussed on theoretical and experimental grounds as well as its gating by circadian rhythmicity The rhythm generating mechanism is modeled The circadian oscillation of the plasma membrane confers a temporal parameter
