Digital Geometry Geometric Methods For Digital Picture Analysis:

Digital Geometry Reinhard Klette, Azriel Rosenfeld, 2004-08-06 The first book on digital geometry by the leaders in the field

Digital Geometry Reinhard Klette, Azriel Rosenfeld, 2006 Computational Modelling of Objects Represented in Images. Fundamentals, Methods and Applications João Manuel R.S. Tavares, Jorge R.M. Natal, 2018-05-08 This book contains keynote lectures and full papers presented at the International Symposium on Computational Modelling of Objects Represented in Images CompIMAGE held in Coimbra Portugal on 20-21 October 2006 International contributions from nineteen countries provide a comprehensive coverage of the current state of the art in the fields of Image Processing and Analysis Image Segmentation Data Interpolation Registration Acquisition and Compression 3D Reconstruction Objects Tracking Motion and Deformation Analysis Objects Simulation Medical Imaging Computational Bioimaging and Visualization Related techniques also covered in this book include the finite element method modal analyses stochastic methods principal and independent components analyses and distribution models Computational Modelling of Objects Represented in Images will be useful to academics researchers and professionals in Computational Vision image processing and analysis Computer Sciences and Computational Mechanics

Encyclopedia of Image Processing Phillip A. Laplante, 2018-11-08 The Encyclopedia of Image Processing presents a vast collection of well written articles covering image processing fundamentals e.g. color theory fuzzy sets cryptography and applications e.g. geographic information systems traffic analysis forgery detection Image processing advances have enabled many applications in healthcare avionics robotics natural resource discovery and defense which makes this text a key asset for both academic and industrial libraries and applied scientists and engineers working in any field that utilizes image processing Written by experts from both academia and industry it is structured using the ACM Computing Classification System CCS first published in 1988 but most recently updated in 2012

Modern Approaches to Discrete Curvature Laurent Najman, Pascal Romon, 2017-10-04 This book provides a valuable glimpse into discrete curvature a rich new field of research which blends discrete mathematics differential geometry probability and computer graphics It includes a vast collection of ideas and tools which will offer something new to all interested readers Discrete geometry has arisen as much as a theoretical development as in response to unforeseen challenges coming from applications Discrete and continuous geometries have turned out to be intimately connected Discrete curvature is the key concept connecting them through many bridges in numerous fields metric spaces Riemannian and Euclidean geometries geometric measure theory topology partial differential equations calculus of variations gradient flows asymptotic analysis probability harmonic analysis graph theory etc In spite of its crucial importance both in theoretical mathematics and in applications up to now almost no books have provided a coherent outlook on this emerging field

Mathematical Problems in Data Science Li M. Chen, Zhixun Su, Bo Jiang, 2015-12-15 This book describes current problems in data science and Big Data Key topics are data classification Graph Cut the Laplacian Matrix Google Page Rank

efficient algorithms hardness of problems different types of big data geometric data structures topological data processing and various learning methods For unsolved problems such as incomplete data relation and reconstruction the book includes possible solutions and both statistical and computational methods for data analysis Initial chapters focus on exploring the properties of incomplete data sets and partial connectedness among data points or data sets Discussions also cover the completion problem of Netflix matrix machine learning method on massive data sets image segmentation and video search This book introduces software tools for data science and Big Data such MapReduce Hadoop and Spark This book contains three parts The first part explores the fundamental tools of data science It includes basic graph theoretical methods statistical and AI methods for massive data sets In second part chapters focus on the procedural treatment of data science problems including machine learning methods mathematical image and video processing topological data analysis and statistical methods The final section provides case studies on special topics in variational learning manifold learning business and financial data recovery geometric search and computing models Mathematical Problems in Data Science is a valuable resource for researchers and professionals working in data science information systems and networks Advanced level students studying computer science electrical engineering and mathematics will also find the content helpful

Mathematical Morphology and Its Applications to Signal and Image Processing Cris L. Luengo Hendriks, Gunilla Borgefors, Robin Strand, 2013-05-13 This book contains the refereed proceedings of the 11th International Symposium on Mathematical Morphology ISMM 2013 held in Uppsala Sweden in May 2013 The 41 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 52 submissions The papers are organized in topical sections on theory trees and hierarchies adaptive morphology colour manifolds and metrics filtering detectors and descriptors and applications

Advances in Visual Computing George Bebis, 2006-10-26 The two volume set LNCS 4291 and LNCS 4292 constitutes the refereed proceedings of the Second International Symposium on Visual Computing ISVC 2006 held in Lake Tahoe NV USA in November 2006 The 65 revised full papers and 56 poster papers presented together with 57 papers of ten special tracks were carefully reviewed and selected from more than 280 submissions The papers cover the four main areas of visual computing

Encyclopedia of Computer Science and Technology Phillip A. Laplante, 2017-10-02 With breadth and depth of coverage the Encyclopedia of Computer Science and Technology Second Edition has a multi disciplinary scope drawing together comprehensive coverage of the inter related aspects of computer science and technology The topics covered in this encyclopedia include General and reference Hardware Computer systems organization Networks Software and its engineering Theory of computation Mathematics of computing Information systems Security and privacy Human centered computing Computing methodologies Applied computing Professional issues Leading figures in the history of computer science The encyclopedia is structured according to the ACM Computing Classification System CCS first published in 1988 but subsequently revised in 2012 This classification system is the most comprehensive and is considered the de facto

ontological framework for the computing field The encyclopedia brings together the information and historical context that students practicing professionals researchers and academicians need to have a strong and solid foundation in all aspects of computer science and technology

Digital Geometry Azriel Rosenfeld,Robert A. Melter,1987 *Digital Image Processing* Rafael C. Gonzalez,Richard Eugene Woods,2008 A comprehensive digital image processing book that reflects new trends in this field such as document image compression and data compression standards The book includes a complete rewrite of image data compression a new chapter on image analysis and a new section on image morphology
