[C++ Template Metaprogramming](#) David Abrahams, Aleksey Gurtovoy, 2004-12-10 C Template Metaprogramming sheds light on the most powerful idioms of today s C at long last delivering practical metaprogramming tools and techniques into the hands of the everyday programmer A metaprogram is a program that generates or manipulates program code Ever since generic programming was introduced to C programmers have discovered myriad template tricks for manipulating programs as they are compiled effectively eliminating the barrier between program and metaprogram While excitement among C experts about these capabilities has reached the community at large their practical application remains out of reach for most programmers This book explains what metaprogramming is and how it is best used It provides the foundation you ll need to use the template metaprogramming effectively in your own work This book is aimed at any programmer who is comfortable with idioms of the Standard Template Library STL C power users will gain a new insight into their existing work and a new fluency in the domain of metaprogramming Intermediate level programmers who have learned

a few advanced template techniques will see where these tricks fit in the big picture and will gain the conceptual foundation to use them with discipline Programmers who have caught the scent of metaprogramming but for whom it is still mysterious will finally gain a clear understanding of how when and why it works All readers will leave with a new tool of unprecedented power at their disposal the Boost Metaprogramming Library Note CD materials are only available with the print edition
