Content Analysis of Verbal Behavior Louis A. Gottschalk, Fernando Lolas, Linda L. Viney, 2012-12-06 The psychological states of patients with diabetes mellitus were compared with those of patients suffering from other chronic diseases and people with no diagnosed chronic diseases These states were assessed by applying content analysis scales to transcripts of their descriptions of their current experiences Analyses of the diabetics scale scores revealed a pattern characterized by much anxiety depression anger expressed both directly and indirectly together with feelings of helplessness The sources of anxiety which proved to be of most importance to them were fears of death and bodily mutilation as well as guilt and shame They experienced little sense of sharing with most people around them although they showed considerable enjoyment of close relationships with family and friends This pattern of psychological states did not vary with the sex of the patients or whether they were interviewed in a hospital or at home nor with recency of onset or multiplicity of health problems It was similar to the pattern of patients with other chronic diseases but differed significantly from that of the healthy group Acknowledgment The authors wish to acknowledge the contribution of Carol Preston to the collection and analysis of these data which were made available in part by patients of the Wollongong Hospital and members of the Illawarra Branch of the Diabetic Association of New South Wales References 1 Strong JA Baird JD 1971 Diseases of the endocrine system In Davidson S McLeod J eds The principles and practice of medicine

The measurement of physiological states through the content analysis of verbal behavior, by L.A. Gottschalk and G.C. Gleser Louis August Gottschalk,Goldine C. Gleser, **Language in Psychotherapy** Robert L. Russell,2013-11-21 This book of original contributions presents investigations of psycho therapeutic interaction While the methodological strategies and the oretical orientations of these investigations are notably diverse the utterance by utterance analysis of

client therapist dialogue provides a strong commonality of interest and a particularly productive perspective from which the process of psychotherapy can be illuminated. It is hoped that the contributions selected and the problems with which they are occupied will make evident the rich possibilities such a perspective has to offer. It should be noted however that the present volume is not a compendium; any effort to be exhaustive would be thwarted by considerations of length alone. Thus certain omissions were inevitable. It is hoped that the interested reader will use the extensive references to become acquainted with the works not here included. Whatever effort I extended as editor and contributor to this volume could not have been undertaken without the lifelong spirit of support of my parents Selma S and Jay F Russell. I dedicate my contribution to them.

Content Analysis Joan Bauer Stoddard, 1980 *Children in the Holocaust and its Aftermath* Sharon Kangisser Cohen, Eva Fogelman, Dalia Ofer, 2017-04-01 The testimonies of individuals who survived the Holocaust as children pose distinct emotional and intellectual challenges for researchers as now adult interviewees recall profound childhood experiences of suffering and persecution; they also invoke their own historical awareness and memories of their postwar lives requiring readers to follow simultaneous disparate narratives. This interdisciplinary volume brings together historians, psychologists, and other scholars to explore child survivors' accounts. With a central focus on the Kestenberg Holocaust Child Survivor Archives' over 1,500 testimonies, it not only enlarges our understanding of the Holocaust empirically but illuminates the methodological, theoretical, and institutional dimensions of this unique form of historical record. Handbook of Applied Social Research Methods Leonard Bickman, Debra J. Rog, 1998 *Handbook of Applied Social Research Methods* is a comprehensive, intelligent, authoritative guide to researchers who need to select the most suitable approach, specific designs, data collection procedures for their applied research. **Abstracts, 1977** **Medieval Studies and the Computer** Anne Gilmour-Bryson, 2014-05-19 *Medieval Studies and the Computer* focuses on the use of computers in medieval studies and humanities research. Topics covered range from encoding and concordancing texts to the use of conceptual glossaries by medievalists, as well as the use of computers for compiling Middle English lexicography and the Wisconsin Dictionary of the Old Spanish Language. A computer analysis of metrical patterns in the epic *Beowulf* and of Notker Labeo's Old High German is also presented. Comprised of 26 chapters, this volume begins by discussing contexts in concordances and the set of conventions employed in text encoding. The reader is then introduced to the series of initiatives undertaken in Belgium to study Latin literature and linguistics; the use of conceptual glossaries by medieval scholars; and the use of the computer to make a word list of the *Decretum Gratiani* and to study Geoffrey Chaucer's vocabulary. Subsequent chapters discuss a computer program called KLIC (Key Letter In Context) for graphological analysis; a set of routines written in SAIL (Stanford Artificial Intelligence Language) for use by social historians in quantitative analysis or text processing; and the use of Mark IV, a general purpose file management system to analyze medieval charters. This book will be of interest to medievalists.
