*Organizations* Jan Achterbergh, Dirk Vriens, 2009-08-07 to do to ensure survival and 2 principles for designing organizational structures in such a way that they can realize the required functions adequately In the course of their elaboration we will show that these principles are general i e that they hold for all organizations 1 5 Conceptual Background To describe organizations as social systems conducting experiments and to present principles for designing an infrastructure supporting the social experiment we use concepts from organizational cybernetics social systems theory and Aristotle s ethics In this book we hope to show that concepts from these traditions as introduced by their relevant representatives can be integrated into a framework supporting our perspective on organizations To this purpose we introduce in each of the following chapters relevant concepts from an author belonging to one of these three traditions and show how these concepts contribute to either describing organizations as social experiments in Part I of the book to formulating principles for the design of functions and organization structures supporting meaningful survival Part II or to formulating principles for the design of organization structures enabling the rich sense of meaningful survival Part III Of course the relevance of cybernetics social systems theory and Aristotle s ethics can only be understood in full after they have been treated in more detail but based on what we said above it may already be possible to see why these theories have been chosen as conceptual background

*Fundamentals of Algebraic Specification 2* Hartmut Ehrig, Bernd Mahr, 1989-12-28 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as

- 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians
- 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs
- 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms

**Machine Translation and the Information Soup** David Farwell, Laurie Gerber, Eduard Hovy, 2003-06-29 Machine Translation and the Information Soup Over the past few years machine translation has grown from a tantalizing dream to a respectable and stable scientific linguistic enterprise with users commercial systems university research and government participation But until very recently MT has been performed as a relatively distinct operation so what isolated from other text processing Today this situation is changing rapidly The explosive growth of the Web has brought multilingual text into the reach of nearly everyone with a computer We live in a soup of information an increasingly multilingual bouillabaisse And to partake of this soup we can use MT systems together with more and more tools and language processing technologies information retrieval engines automated text summarizers and multimodal and multilingual displays Though some of them may still be rather experimental and though they may not quite fit together well yet it is clear that the future will offer text manipulation systems that contain all these functions seamlessly interconnected in various ways
