templates control and branching variable and parameters sorting and grouping and using modular stylesheets Also examines strings dates and numbers working with multiple documents and text generating identifiers and testing and documentation All topics contain incremental code examples Addresses the much requested processing steps for typical XML document and data vocabularies including how the processing model differs from most programming languages Beginning XSLT and XPath Transforming XML Documents and Data is the essential guide you need to thoroughly understand the important XSLT processing model Note CD ROM DVD and other supplementary materials are not included as part of eBook file

reality the difference between them is like the difference between night and day HTML is used to format information but it isn t very useful when it comes to describing information For example you can use HTML to format a table but you can t use HTML to describe the data elements within the table The reason for this is that you can t really depict something as abstract as a distributor or a customer with HTML which is where XML comes into the picture XML can be and is used to define the structure of data rather than its format This Fast Start guide begins by showing you the basics of the XML language and then builds on that knowledge to show you how to create an XML document   Beginning XML Databases with Beginning Oracle App Express W/Ws Set Powell,2009-04
