Abstract

Ideas about morphological complexity have been used to classify languages and to link complexity to language age and social structure. Creoles and sign languages are often framed as younger and structurally simpler than other languages. Concurrently, sign language morphology has been described as paradoxical, as both simple and complex. This paper is a critical examination of claims about morphological complexity and its relationship to language age and social structure. We show that the theoretical and empirical foundations of claims that sign language morphology is paradoxical are flawed. Specifically, argumentation and evidence supporting analogies between creole and sign language complexity adopt theoretically contested and ideologically problematic assumptions about creoles and uncritically apply them to sign languages. We identify four flaws in argumentation: (i) use of limited morphological data to generate claims about global complexity, (ii) association of binary language categories with categorical complexity differences, (iii) use of language age to motivate predictions about morphological complexity, and (iv) extrapolating from creole complexity to sign language complexity. Based on these flaws, we develop nine theoretical and practical recommendations for working with morphological complexity and discuss uncritical cross-disciplinary transfer of ideas.

1. Introduction

‘Sign languages and creoles are two kinds of young languages, and, as such, may be expected to be less complex than their older counterparts’ (Gil 2014: abstract). This and similar claims illustrate cross-fertilisation of ideas between creole and sign language linguistics that has led to predictions that sign language structure should be SIMPLE like creole structure is claimed to be. However, sign language structure, namely its morphology,

Deconstructing Morphology Rochelle Lieber, 1992-04-15 One of the major contributions to theoretical linguistics during the twentieth century has been an advancement of our understanding that the information bearing units which make up human language are organized on a hierarchy of levels It has been an overarching goal of research since the 1930s to determine the precise nature of those levels and what principles guide interactions among them Linguists have typically posited phonological morphological and syntactic levels each with its own distinct vocabulary and organizing principles but in *Deconstructing Morphology* Rochelle Lieber persuasively challenges the existence of a morphological level of language Her argument that rules and vocabulary claimed to belong to the morphological level in fact belong to the levels of syntax and phonology follows the work of Sproat Toman and others Her study however is the first to draw jointly on Chomsky's Government Binding Theory of syntax and on recent research in phonology Ranging broadly over data from many languages including Tagalog English French and Dutch *Deconstructing Morphology* addresses key questions in current morphological and phonological research and provides an innovative view of the overall architecture of grammar [Inflection and Word Formation in Romance Languages](#) Sascha Gaglia, Marc-Olivier Hinzelin, 2012 Morphology and in particular word formation has always played an important role in Romance linguistics since it was introduced in Diez's comparative Romance grammar Recent years have witnessed a surge of interest in inflectional morphology and current research shows a strong interest in paradigmatic analyses This volume brings together research exploring different areas of morphology from a variety of theoretical and methodological perspectives On an empirical basis the theoretical assumption of the Autonomy of Morphology is discussed critically Data driven approaches carefully examine concrete morphological phenomena in Romance languages and dialects Topics include syncretism and allomorphy in verbs pronouns and articles as well as the use of specific derivational suffixes in word formation Together the articles in this volume provide insights into issues currently debated in Romance morphology appealing to scholars of morphology Romance linguistics and advanced students alike
