Modern Logic — A Survey E. Agazzi, 2012-12-06 Logic has attained in our century a development incomparably greater than in any past age of its long history and this has led to such an enrichment and proliferation of its aspects that the problem of some kind of unified comprehension of this discipline seems nowadays unavoidable This

splitting into several subdomains is the natural consequence of the fact that Logic has intended to adopt in our century the status of a science This always implies that the general optics under which a certain set of problems used to be considered breaks into a lot of specialized sectors of inquiry each of them being characterized by the introduction of specific viewpoints and of technical tools of its own The first impression that often accompanies the creation of one of such specialized branches in a discipline is that one has succeeded in isolating the scientific core of it by restricting the somehow vague and redundant generality of its original philosophical configuration But after a while it appears that some of the discarded aspects are indeed important and a new specialized domain of investigation is created to explore them By following this procedure one finally finds himself confronted with such a variety of independent fields of research that one wonders whether the fact of labelling them under a common denomination be nothing but the contingent effect of a pure historical tradition

*Proceedings of the 1972 Biennial Meeting of the Philosophy of Science Association* K. Schaffner, Robert S.

Cohen, 2012-12-06 This book contains selected papers from symposia and contributed sessions presented at the third biennial meeting of the Philosophy of Science Association held in Lansing Michigan on October 27-29 1972 We are grateful to Michigan State University and especially to Professor Peter Asquith and his students and colleagues for their friendly and efficient hospitality in organizing the circumstances of the sessions and of the intersessions the unscheduled free time which is so important to any scholarly gathering Several of the symposium papers have unhappily not been made available those of Alasdair MacIntyre and Sidney Morgenbesser in the session on the social sciences that of Ian Hacking in the session on randomness and that of Imre Lakatos in the session on discovery and rationality in science Department of History and KENNETH F SCHAFFNER Philosophy of Science University of Pittsburgh Center for the Philosophy and ROBERT S COHEN History of Science Boston University TABLE OF CONTENTS PREFACE v PART I SYMPOSIUM SPACE TIME AND MATTER THE FOUNDATIONS OF GEOMETRODYNAMICS ADOLF GRUNBAUM Space Time and Matter The Foundations of Geometrodynamics Introductory Remarks 3 CHARLES W MISNER Some Topics for Philosophical Inquiry Concerning the Theories of Mathematical Geometrodynamics and of Physical Geometrodynamics 7 JOHN STACHEL The Rise and Fall of Geometrodynamics 31 PART II PHILOSOPHICAL PROBLEMS OF BIOLOGY AND PSYCHOLOGY STUART KAUFFMAN Elsassner Generalized Complementarity and Finite Classes A Critique of His Anti Reductionism 57 WILLIAM C Aspects of Philosophical Logic Uwe Mönnich, 2012-12-06 This volume constitutes the Proceedings of a workshop on formal semantics of natural languages which was held in Tübingen from the 1st to the 3rd of December 1977 Its main body consists of revised versions of most of the papers presented on that occasion Three supplementary papers those by Gabbay and Sma by are included because they seem to be of particular interest in their respective fields The area covered by the work of scholars engaged in philosophical logic and the formal analysis of natural languages testifies to the liveliness in those disciplines It would have been impossible to aim at a complete documentation of relevant research within the limits imposed by a short

conference whereas concentration on a single topic would have conveyed the false impression of uniformity foreign to a young and active field It is hoped that the essays collected in this volume strike a reasonable balance between the two extremes The topics discussed here certainly belong to the most important ones enjoying the attention of linguists and philosophers alike the analysis of tense in formal and natural languages van Benthem Gabbay the quickly expanding domain of generalized quantifiers Goldblatt the problem of vagueness Kamp the connected areas of pronominal reference Smaby and presupposition von Stechow and last but not least modal logic as a sort of all embracing theoretical framework Bressan The workshop which led to this collection formed part of the activities celebrating the 500th anniversary of Tiibingen University
