

BACTERIAL ADHESION

- Adherence is an essential step in bacterial pathogenesis or infection, required for colonizing a new host.
- Bacterial adhesins are also a potential target for prophylaxis or treatment of bacterial infections.
- Bacteria are typically found attached to and living in close association with surfaces.
- During the bacterial lifespan, a bacterium is subjected to frequent shear-forces.
- In the crudest sense, bacterial adhesins serve as anchors allowing bacteria to overcome these environmental shear forces, thus remaining in their desired environment.
- However, bacterial adhesins do not serve as a sort of universal bacterial velcro.
- Rather, they act as specific surface recognition molecules, allowing the targeting of a particular bacterium to a particular surface.
