**Victorian Popularizers of Science** Bernard Lightman, 2009-10-15 The ideas of Charles Darwin and his fellow Victorian scientists have had an abiding effect on the modern world. But at the time *The Origin of Species* was published in 1859, the British public looked not to practicing scientists but to a growing group of professional writers and journalists to interpret the larger meaning of scientific theories in terms they could understand and in ways they could appreciate. *Victorian Popularizers of Science* focuses on this important group of men and women who wrote about science for a general audience in the second half of the nineteenth century. Bernard Lightman examines more than thirty of the most prolific, influential, and interesting popularizers of the day, investigating the dramatic lecturing techniques, vivid illustrations, and accessible literary styles they used to communicate with their audience. By focusing on a forgotten coterie of science writers, their publishers, and their public, Lightman offers new insights into the role of women in scientific inquiry, the market for scientific knowledge, tensions between religion and science, and the complexities of scientific authority in nineteenth-century Britain.

*Inventive Geniuses Who Changed the World* John Bailey, 2021-10-02 This book describes the life and times of fifty-three great British scientists and engineers, male and female, inventive geniuses who changed the world, improving the lives of mankind and propelling humanity forward. Their stories abound with personal ingenuity, brilliance, and scientific or engineering wizardry, and with the ambition to satisfy fundamental human needs. The author aspires to set these individual achievements in the socio-political context of their place in history, sometimes embracing the activities of others to round off the story and scientific contribution. Avoiding overly technical language, he nonetheless succeeds in making complex theories and technologies more comprehensible and accessible to a lay audience. This book is a must for all those interested in the prehistory and history of the steam engine, transport, communication, technology, public health services, and many topics from the natural sciences. Many of the inventions described in its pages have helped shape the modern world.

*Manhattan, the Army, and the Atomic Bomb* Vincent C. Jones, 1985 Discusses the role of the War Department, Manhattan District, and other Army agencies and individuals from 1939 through World War II in developing and employing the atomic bomb.

**The Victorian Scientist** Arthur Jack Meadows,2004 At the start of the nineteenth century science was a minority cultural interest By the end it had become one of the central components of contemporary thought The growth of science as a profession began taking shape in the Victorian period and was due to the influence of just a small group of men Who these men were and how they created the foundations of the modern scientific community we recognize today is revealed in this thought provoking book by Jack Meadows through the individual experiences of figures such as Darwin Huxley and Faraday as well as lesser known scientists of the time Set against the backdrop of a changing world of improved communication and travel Meadows uncovers how these scientists fought against the limitations of an education in the classics and strove to develop their scientific interests into a profession The Victorian Scientist tracks the growth of laboratories and research groups and the importance that new scientific societies journals and lectures played in making Victorian science an essential stage in the evolution of scientific communication today
