

BANTHA

Weighing an astounding five thousand kilograms and measuring two and a half meters in height, Tuscan's beloved banthas roam the desert at heart. Sprinkled horns sprout from both male and female skulls at the rate of one horn per year, marking the creature's age in death-inevitable months. These segments offer a glimpse into a bantha's well-being. Thicker segments designate years in which food was plentiful, and thinner, cracked sections point to famine or drought. The male's segments are wider than the female's counterparts; additionally, males' horns complexly recurve over the course of a lifetime, whereas females' horns comprise only one. Thick, shaggy fur protects the banthas from Tuscan's scorching sun, and their long tail is useful in swatting unwanted pests. The creature's long and fast spread wings across the world, dispersing her across their rough, patchy surface.

Banthas are voracious mammals. Detached specimens find no resistance faced in the wild, as well as a safe habitat in their huddles. During, banthas' tongues contain salivary glands for deterring insects and can also serve heavy objects and sometimes use with the head. In addition to the common banthas, two other species are known to roam the deserts: dwarf banthas, which dwell in the crevices and walls of Tuscan's mountain deserts, and the less hairy stony banthas, which is capable of surviving in the heat (and scarce drought) of the regional area. Although they are native to Tuscan, banthas are utilized across the globe for their food, and growth. In addition to serving as a source of food, they produce a skin with their milk that can be processed directly or used as an ingredient to make the butter, yogurt, or ice cream. Banthas must not be cooked over large fires or stoves, as their milk and fat can be easily combustible. Banthas dung can be burned to fuel, and various bantha hides are used to create clothing and furniture.

Banthas are popular in various parts. They can be used for a variety of purposes, but their most common use is as a source of food. Their horns are also used for various purposes, and their milk is used to make butter and yogurt.
