Modeling Digital Systems

- We seek to describe attributes of digital systems common to multiple levels of abstraction
    - events, propagation delays, concurrency
    - waveforms and timing
    - signal values
    - shared signals

- Hardware description languages must provide constructs for naturally describing these attributes of a specific design
    - simulators use such descriptions for "mimicing" the physical system
    - synthesis compilers use such descriptions for synthesizing manufacturable hardware specifications that conform to this description
