Approaching the Kannan-Lovász-Simonovits and Variance Conjectures David Alonso-Gutiérrez, Jesús Bastero, 2015-01-07 Focusing on two central conjectures of Asymptotic Geometric Analysis the Kannan Lov sz Simonovits spectral gap conjecture and the variance conjecture these Lecture Notes present the theory in an accessible way so that interested readers even those who are not experts in the field will be able to appreciate

the treated topics Offering a presentation suitable for professionals with little background in analysis geometry or probability the work goes directly to the connection between isoperimetric type inequalities and functional inequalities giving the interested reader rapid access to the core of these conjectures In addition four recent and important results in this theory are presented in a compelling way The first two are theorems due to Eldan Klartag and Ball Nguyen relating the variance and the KLS conjectures respectively to the hyperplane conjecture Next the main ideas needed prove the best known estimate for the thin shell width given by Gu don Milman and an approach to Eldan s work on the connection between the thin shell width and the KLS conjecture are detailed

Integral Geometry and Geometric Probability Luis A. Santalo,1984-12-28 Integral geometry originated with problems on geometrical probability and convex bodies Its later developments however have proved to be useful in several fields ranging from pure mathematics measure theory continuous groups to technical and applied disciplines pattern recognition stereology This book is a systematic exposition of the theory and a compilation of the main results in the field The volume can be used for a one semester undergraduate course in probability and differential geometry or as a complement to classical courses on differential geometry Lie groups or probability

Convex Analysis and Optimization in Hadamard Spaces Miroslav Bacak,2014-10-29 In the past two decades convex analysis and optimization have been developed in Hadamard spaces This book represents a first attempt to give a systematic account on the subject Hadamard spaces are complete geodesic spaces of nonpositive curvature They include Hilbert spaces Hadamard manifolds Euclidean buildings and many other important spaces While the role of Hadamard spaces in geometry and geometric group theory has been studied for a long time first analytical results appeared as late as in the 1990s Remarkably it turns out that

Hadamard spaces are appropriate for the theory of convex sets and convex functions outside of linear spaces. Since convexity underpins a large number of results in the geometry of Hadamard spaces, we believe that its systematic study is of substantial interest. Optimization methods then address various computational issues and provide us with approximation algorithms which may be useful in sciences and engineering. We present a detailed description of such an application to computational phylogenetics. The book is primarily aimed at both graduate students and researchers in analysis and optimization but it is accessible to advanced undergraduate students as well.
