**An Analysis of Time-shared Computer Systems** Allan L. Scherr,1965 Some of the aspects of the operation of time shared interactive computer systems are analyzed The emphasis is on the reaction of hardware systems to the demands that its users make upon it Simply stated the problem is to characterize both time shared systems and their users in order to be able to predict the performance of the two operating together Portions of this problem include the specification and measurement of user characteristics the development and verification of both simulation and mathematical models for time shared systems and the specification and measurement of performance metrics for such systems The user and some of the performance measurements were made on Project MAC s Compatible Time Sharing System CTSS Author [An Analysis of time-shared computer systems](#) Allan Lee Scherr,1967

**Analysis of a Continuum of Processor-sharing Models for Time-shared Computer Systems** Jiunn Hsu,1971 Processor sharing models of time shared computer systems are defined and some new results are presented The major emphasis of this research is on the modeling and analysis of new models of time shared computer systems and on the finding of some fundamental properties which apply to the average number of customers in the system and the average response time functions for a large class of time shared computer systems The family of selfish scheduling algorithms is defined and the Laplace transform of the response time functions are obtained A family of scheduling algorithms whose performance ranges between that of the RR system and the FB system is constructed A simple relationship between the time dependent average number of customers in the system and the average response time functions for a large class of M M 1 systems is formulated Finally some fundamental properties are established which apply to the average response time functions for all time shared computer systems Author

**Performance Evaluation of Multiprogrammed Time-shared Computer Systems** Akira Sekino,1972 The report presents a comprehensive set of hierarchically organized modular analytical models developed for the performance evaluation of multiprogrammed virtual memory time shared computer systems using demand paging The hierarchy of models contains a user behavior model a secondary memory model a program behavior model a processor model and a total system model This thesis is particularly concerned with the last three models The program behavior model developed in this thesis permits one to estimate the frequency of paging expected on a given processing system The processor model enables one to evaluate the throughput of a given multi processor multi memory processing system under multiprogramming Finally the total system model allows us to derive the response time distribution of an entire computer system under study The report includes two PL I programs Author [On-line Computing: Time-shared Man-computer Systems](#) Walter J. A methodology for evaluating time-shared computer system usage Michael M. Gold,1967

The development of time shared computer systems has led to major technical and philosophical changes in the computer field in this decade A large number of designers manufactureres and users of such systems have expended great amounts of effort in the development of the capabilities of the computer and the means to use it However little or no effort has yet been expended to evaluate these systems in terms of their usefulness for present or future customers The research reported here has focused on the development of a methodology through which time shared computer system usage can be evaluated It is based on a study of the characteristics and design of present and proposed computer systems as well as relevant behavioral theory and research Five categories of variables are included in the resulting methodology namely those which are measures of 1 the cost of using the system 2 the performance produced through the use of the computer system 3 the speed with which results could be produced 4 the amount of learning resulting from the use of the computer system and 5 the attitudes of the users of the computer system
