Algorithms for Computer Algebra Keith O. Geddes, Stephen R. Czapor, George Labahn, 2007-06-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and

analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields

Elementary Functions Andrei Bourchtein, Ludmila Bourchtein, 2023-05-31 This textbook focuses on the study of different kinds of elementary functions ubiquitous both in high school Algebra and Calculus To analyze the functions ranging from polynomial to trigonometric ones it uses rudimentary techniques available to high school students and at the same time follows the mathematical rigor appropriate for university level courses Contrary to other books of Pre Calculus this textbook emphasizes the study of elementary functions with rigor appropriate for university level courses in mathematics although the exposition is confined to the pre limit topics and techniques This makes the book useful on the one hand as an introduction to

mathematical reasoning and methods of proofs in mathematical analysis and on the other hand as a preparatory course on the properties of different kinds of elementary functions The textbook is aimed at university freshmen and high school students interested in learning strict mathematical reasoning and in preparing a solid base for subsequent study of elementary functions at advanced level of Calculus and Analysis The required prerequisites correspond to the level of the high school Algebra All the preliminary concepts and results related to the elementary functions are covered in the initial part of the text This makes the textbook suitable for both classroom use and self study
