Amazon Basin:

Human Activities and the Tropical Rainforest Bernard K. Maloney, 1998 Arising initially from a conference the papers published here have been integrated into book form to provide information on human activities and the tropical rainforest in the past and present and on the possible future of the rainforest in a unique way Other books have considered some but not all of these themes however none has stressed the continuity of change over time and its possible outcome for the people of the forest as well as for the forest itself Because of the approach taken this book should appeal across traditional disciplinary boundaries Indeed a prime aim has been to suggest that rainforest because of its complexity and the complexity of people rainforest relationships throughout time deserves study from a broad perspective This book poses more questions than answers about the rainforest and it is hoped that it will encourage readers to think about the rainforest in a wider way than hitherto This book is aimed at geographers physical and human social anthropologists archaeologists pedologists foresters and tropical botanists and will be of value to graduates of various disciplines setting out to research the rainforest

Management of Latin American River Basins Asit K. Biswas, 1999 The Bolivia Summit of the Americas declared in 1996 that despite extensive efforts by countries in the Americas to improve water use and management demand continues to rise while contamination has seriously degraded the quality of freshwater spreading disease and causing economic losses Increasing populations the environmental stresses of economic development and water related public health risks make sustainable water management increasingly complex As per capita demand for water in developing countries is steadily increasing analysis indicates that the cost of future water source development will be double to triple the cost of similar projects in the current decade This book gathers expert analyses of issues surrounding three of Latin America s largest and most important rivers including inter state and intra state conflicts over their fair and sustainable use *Water Resources in the Amazon Basin* Marcos Heil Costa, 1998 *Book of Peoples of the World* Wade Davis, K. David Harrison, Catherine Herbert Howell, 2007 From the foremost authority on history and civilization comes the definitive guide to world cultures showcasing human diversity in all its vast and startling richness 235 color photographs and 37 maps *Amazon Basin Development* Richard L. Worsnop, 1969 **Water Management of the Amazon Basin** Benedito P. F. Braga, Carlos A. Fernández-Jáuregui, 1991 **The Amazon** Mark J. Plotkin, 2020-03-02 The Amazon is a land of superlatives The complex ecosystem covers an area about the size of the continental U S The Amazon River discharges 57 million gallons of water per second in two hours this would be enough to supply all of New York City s 7 5 million residents with water for a year Its flora and fauna are abundant Approximately one of every four flowering plant species on earth resides in the Amazon A single Amazonian river may contain more fish species than all the rivers in Europe combined It is home to the world s largest anteater armadillo freshwater turtle and spider as well as the largest rodent which weighs over 200 lbs catfish 250 lbs and alligator more than half a ton The rainforest which contains approximately 390 billion trees plays a vital role in stabilizing the

global climate by absorbing massive amounts of carbon dioxide or releasing it into the atmosphere if the trees are destroyed Severe droughts in both Brazil and Southeast Asia have been linked to Amazonian deforestation as have changing rainfall patterns in the U S Europe and China The Amazon also serves as home to millions of people Approximately seventy tribes of isolated and uncontacted people are concentrated in the western Amazon completely dependent on the land and river These isolated groups have been described as the most marginalized peoples in the western hemisphere with no voice in the decisions made about their futures and the fate of their forests In this addition to the What Everyone Needs to Know series ecologist and conservation expert Mark J Plotkin who has spent 40 years studying Amazonia its peoples flora and fauna The Amazon offers an engaging overview of this irreplaceable ecosystem and the challenges it faces
